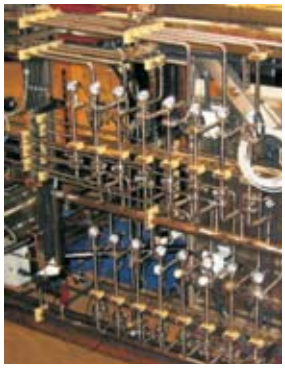
HISTORY



Behringer has developed a reputation in the sanitary and industrial piping industry as a manufacture of dependable, rugged and installer friendly: clamps, supports and hangers. As a company, our heritage can be traced back to Behringer Metal Works a corporation established in 1869. The changes in metal fabricating technology are evident in the Behringer Metal Works plant. A turn of the century steam engine driven pulley system, used to drive metal forming machinery, is still suspended from the plants ceiling. These once modern pulleys are hanging over today's most modern machines: laser cutters and robotic welders. Both companies use state of the art equipment to manufacture quality products. Behringer's longevity, dated to the early years of the industrial revolution, can be explained through our manufacturing: comprehension, quality and competitively priced products.

We first manufactured pipe supports over thirty years ago. Our commitment and understanding of the pipe support market is evident in our vast array of mounting configurations. These arrangements are the answer to engineering modeler problems and field installation tasks .We welcome all support challenges. To keep up with our newest designs visit our web site www.behringersystems.com.

MANUFACTURING EXCELLENCE

Behringer Pipe Hangers and Supports are primarily manufactured in our Branchville, New Jersey facility. To better serve our customer base in an on time dependent industry. We have developed a support manufacturing cell where the majority of our piping products are made under one roof. Having the
