# The New Standard in Fan Powered Terminal Units

## The **Fantom IQ**<sup>TM</sup>

Titus introduces the quietest fan-powered terminal in the market. Fantom IQ™ utilizes the patent pending FAST™ attenuator system that greatly reduces radiated sound power levels. The unique FAST™ attenuator is shipped completely assembled inside the casing, and is easily pulled out and snapped into place for operation.

Fantom IQ™ is available with an ultra-high efficiency GE ECM motor. Titus uses the TITAN™ ECM Programming Process in the ISO certified Harold Straub Aero-Acoustics and Vibration Research Lab. The TITAN™ process ensures the performance of ECM motors in all Titus fan-powered terminals.

Additional features include easy access with top and bottom access, left/right interchangeability, and center discharge.

Titus leads the way with an innovative approach to produce the industry's quietest fan-powered terminal.

## Changing Market

Titus designed the new TFS series fan powered terminal using a base box plus options concept borrowed from the automotive industry. The TFS base box is cost competitive with other manufacturers' non-quiet fan powered terminals. The TFS can be upgraded to a TFS-F by adding the Fantom™ Intelligently Quiet™ (Fantom IQ™) acoustic upgrade package. The TFS-F Fantom IQ is the quietest fan box in the industry!

## Development Process

Extensive research was done to look at all areas of the box design. Titus investigated and tested technologies related to motor development, motor mounting, motor positioning, acoustic materials, cabinet design, blower technology, and alternate liner options. Many of these technologies have been incorporated into the TFS and TFS-F Fantom IQ design.

## Flexibility

The TFS and TFS-F Fantom IQ series fan powered terminals provide the flexibility to be cost competitive when sound is not an issue and extremely quiet when sound is an issue. The TFS and TFS-F Fantom IQ can be mixed on projects to get the best combination of quiet units and cost effective units to meet the needs of the project.

## TITAN ECM Programming Process

The TFS and TFS-F Fantom IQ are available with the optional ultra high efficiency GE ECM motor. Any manufacturer can purchase the ECM motor. The difference is in the development and programming of the ECM motor to operate effectively and efficiently within the specific fan powered terminal's design and configuration. The ECM motor only offers a benefit, if it is developed and programmed correctly within the specific fan box.

Titus uses the Titus Iterative Test & Analysis Network™ (TITAN™) ECM Programming Process in its ISO 9001:2000 certified lab, the Harold Straub Research & Training Center. The TITAN process ensures the performance of the ECM motor in all of the Titus fan-powered terminals.

## Features

Features	Benefits
<b>Access doors</b>	<ul style="list-style-type: none"> <li>Easier both top and bottom access to the motor and damper sections.</li> <li>Improved flanged design means fewer screws and easier removal.</li> </ul>
<b>Center Discharge</b>	<ul style="list-style-type: none"> <li>Same location between right and left hand units.</li> <li>Better shipping protection of water coils.</li> </ul>
<b>Interchangeable motor/blower</b>	<ul style="list-style-type: none"> <li>Easy size changes when necessary in the field.</li> </ul>
<b>Interchangeable inlets</b>	<ul style="list-style-type: none"> <li>Easily change inlet sizes in the field.</li> </ul>
<b>Shaft down motor</b>	<ul style="list-style-type: none"> <li>Reduces shaft loading and increases motor reliability.</li> <li>Shaft down position eliminates the need for fan packing, which eliminates the possibility of the motor being started with fan packing in place.</li> <li>Lower profile casing.</li> <li>Shaft down positions provides vibro-acoustic benefits.</li> </ul>
<b>Easy to install motor/blower assembly</b>	<ul style="list-style-type: none"> <li>Tabbed brackets allow motor/blower assembly to "hang" in place to allow for quick alignment of screw holes for easy field installation.</li> </ul>

## Optional Upgrades

Upgrade	Benefits
<b>FAST acoustic upgrade system</b>	<ul style="list-style-type: none"> <li>Allows the base and quiet boxes to be mixed and matched on a project.</li> <li>Adding FAST attenuators make the TFS Fantom IQ the quietest fan box in the market.</li> </ul>
<b>TITAN programmed ECM motor</b>	<ul style="list-style-type: none"> <li>Energy efficient operation.</li> <li>Pressure independent operation.</li> <li>Uses Titus Iterative Test &amp; Analysis Network (TITAN™).</li> </ul>

Please visit <http://www.titus-hvac.com> or contact your local Titus representative for additional information.

# Fantom IQ<sup>TM</sup>

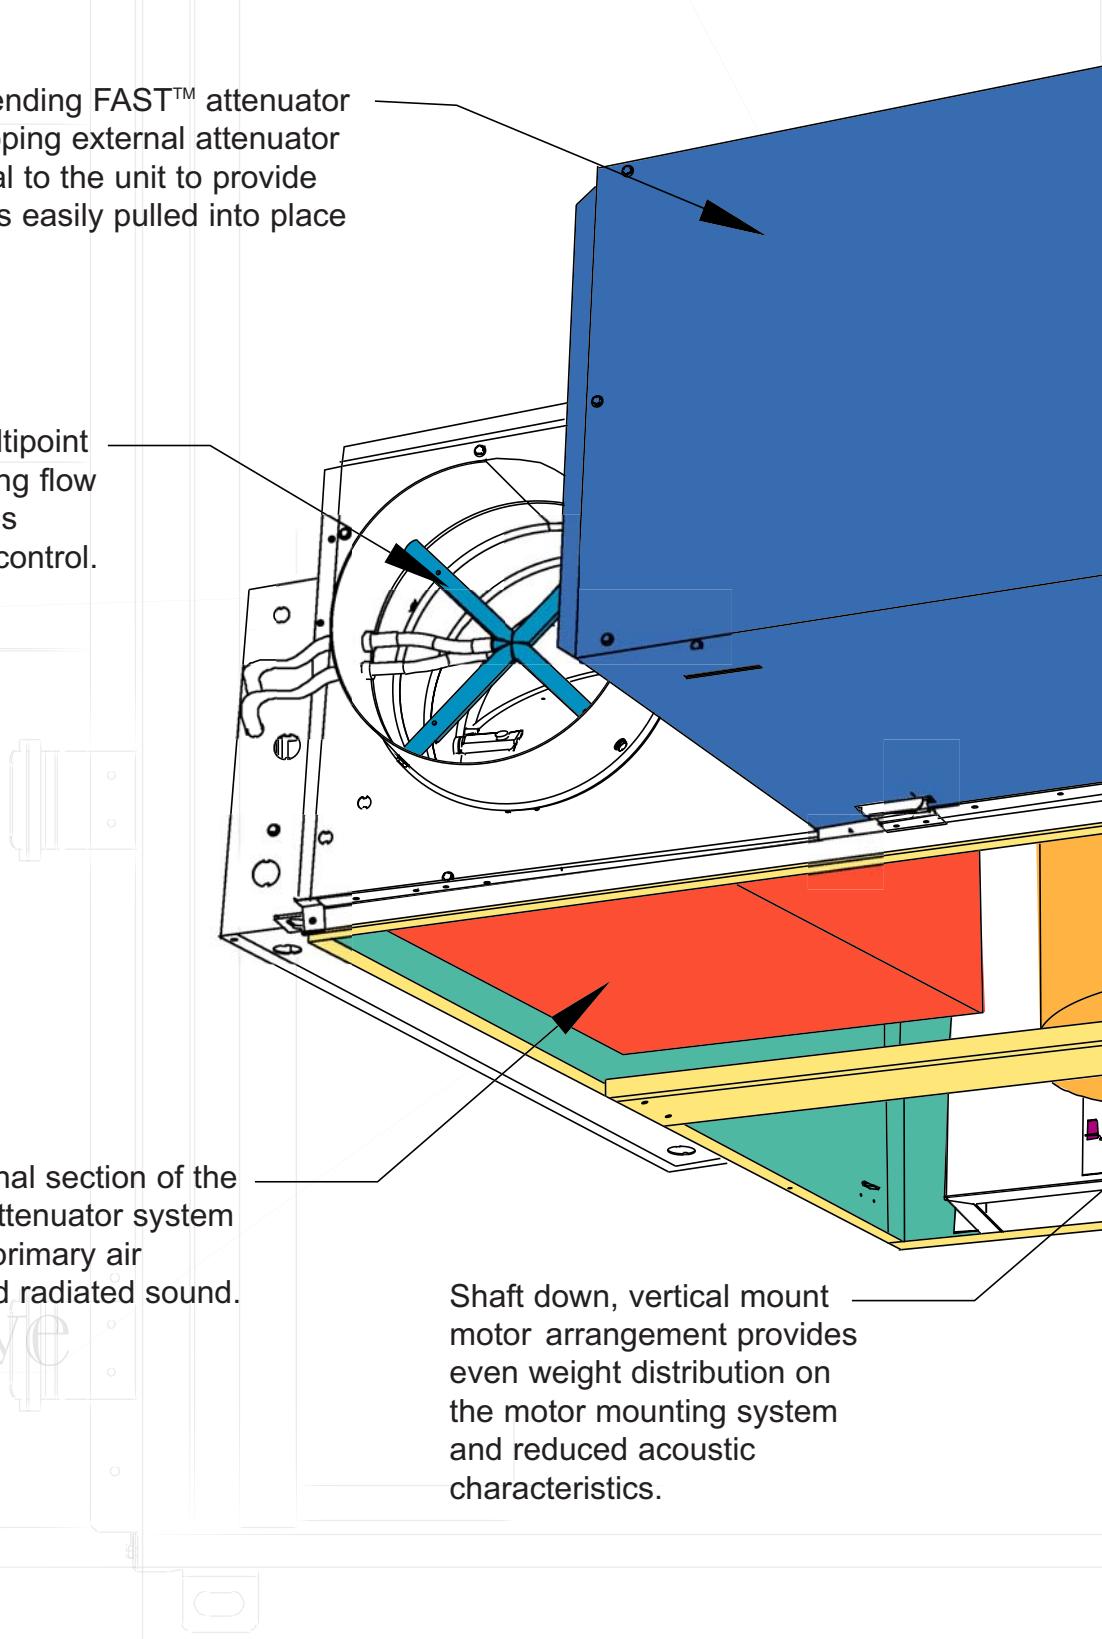

Quiet

The integral patent pending FAST™ attenuator system, has a telescoping external attenuator that is shipped internal to the unit to provide secure shipping and is easily pulled into place when installed.

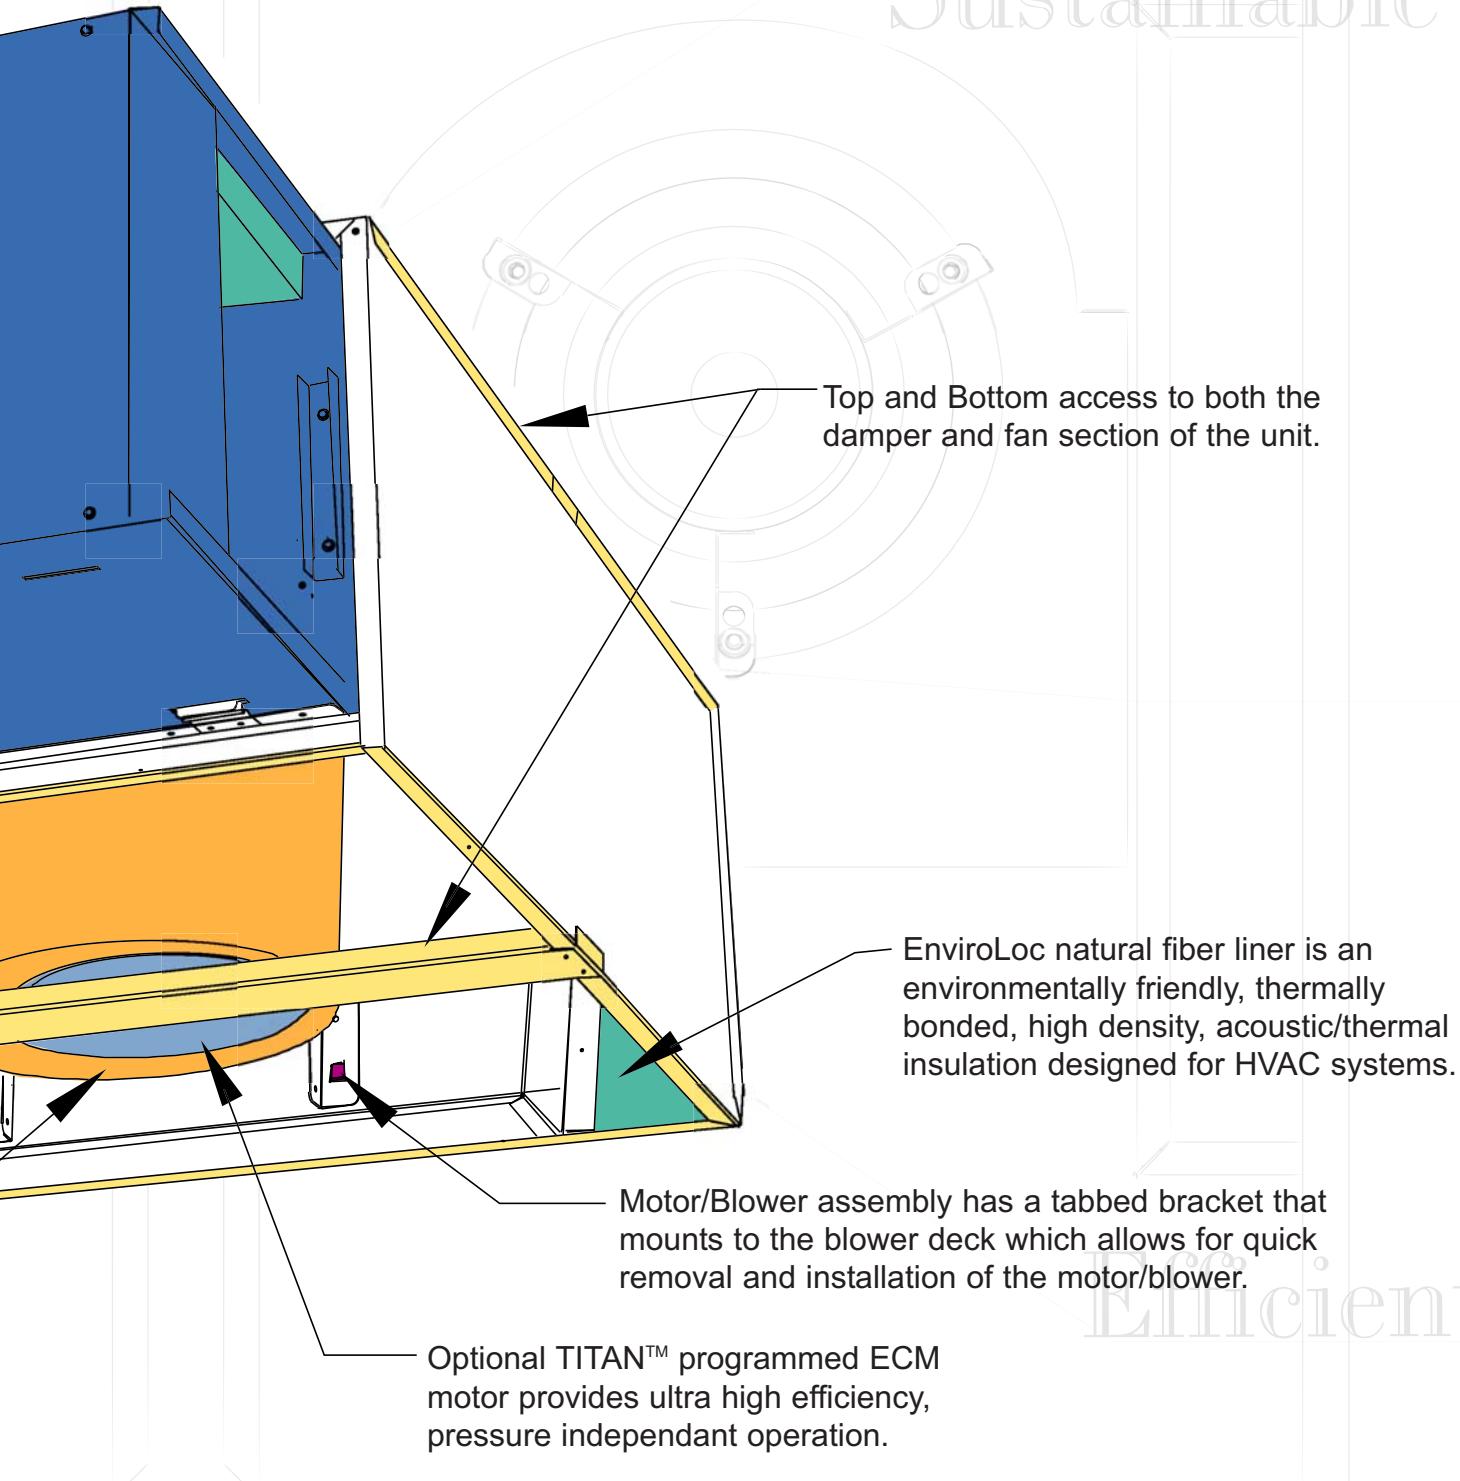

AeroCross multipoint center averaging flow sensor provides excellent flow control.

The internal section of the FAST™ attenuator system reduces primary air generated radiated sound.

Shaft down, vertical mount motor arrangement provides even weight distribution on the motor mounting system and reduced acoustic characteristics.

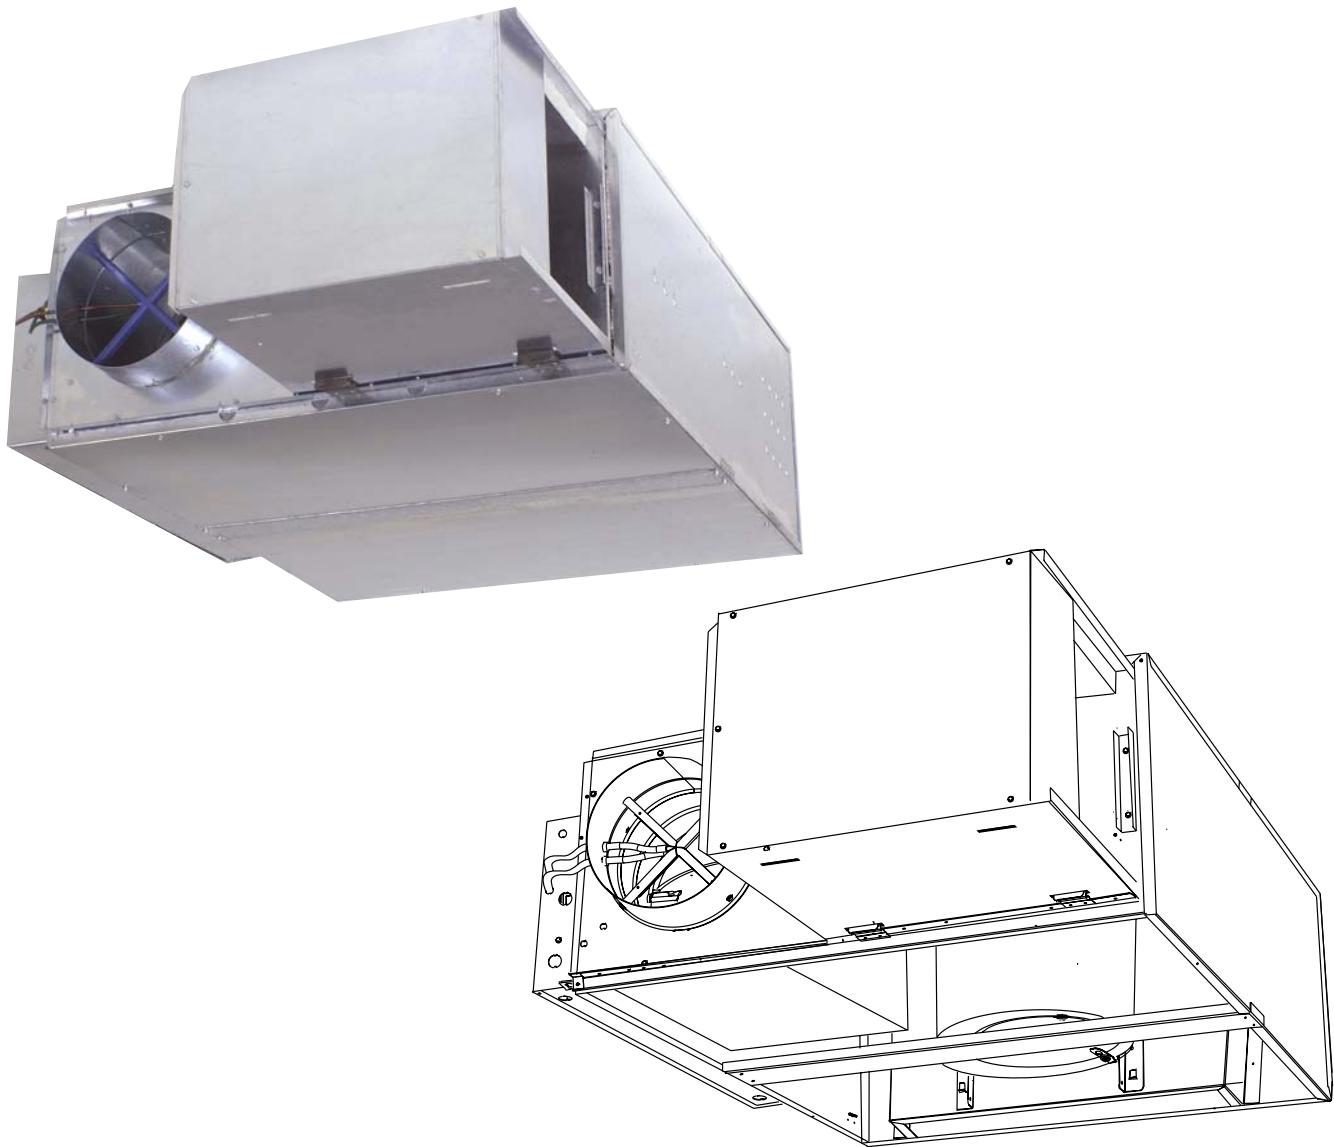

# Sustainable

# Efficient

We are happy to announce the TFS and TFS-F Fantom IQ series fan powered terminals.

Titus has designed the new TFS series fan powered terminal using a base box plus options concept borrowed from the automotive industry. The TFS base box is cost competitive with other manufacturers' non-quiet fan powered terminals. The TFS can be upgraded to a TFS-F by adding the Fantom™ Intelligently Quiet™ (Fantom IQ™) acoustic upgrade package. The TFS-F Fantom IQ is the quietest fan box in the industry!

## TITAN ECM Programming Process

The TFS and TFS-F Fantom IQ are available with the optional ultra high efficiency GE ECM motor. Any manufacturer can purchase the ECM motor. The difference is in the development and programming of the ECM motor to operate effectively and efficiently within the specific fan powered terminal's design and configuration. The ECM motor only offers a benefit if it is developed and programmed correctly within the specific fan box.

Titus uses the Titus Iterative Test & Analysis Network™ (TITAN™) ECM Programming Process in its ISO 9001:2000 certified lab, the Harold Straub Research & Training Center. The TITAN process ensures the performance of the ECM motor in all of the Titus fan powered terminals.

### *History of ECM Motors in Commercial HVAC*

Titus has been programming ECM motors for almost a decade. In early 1995, GE and Titus worked together to bring their ECM motors into the commercial HVAC market.

Understanding that the ECM motor was a significant first cost increase over standard PSC motors, Titus retrofitted one floor of an office building in Dallas, TX with ECM motors and compared the energy usage of that floor against a floor with PSC motors over an eighteen month period to prove the energy savings would provide an acceptable payback of three years or less.

Titus shipped the first ECM fan powered terminal to a school district in Houston in 1997. Titus has been shipping ECM motors ever since. This extensive history and commitment to the development of the ECM motor for commercial applications, makes Titus an expert in ECM development. This expertise is the basis of the TITAN ECM Programming Process.

### *Process Summary*

The TITAN ECM Programming Process is an iterative process of developing constants for the ECM motor to operate at the optimum efficiency and provide pressure independent airflow. Up to a dozen test runs are performed using the GE ECM motor programming interface equipment to ensure the correct motor constants. Developing the correct motor constants allows optimal control of the speed and torque of the motor in the particular fan box design.

The minimum and maximum fan curves are determined based on minimum and maximum rpm of the ECM motor (300 rpm and 1200 rpm respectively). The GE interface unit plots rpm vs. torque of the motor and determines the difference between measured venturi CFM and the ECM calculated CFM. This test is repeated until the difference in venturi CFM and the ECM calculated CFM equals zero. Once the CFM difference is zero, or as close to zero as possible, the ECM constants are saved for that unit's airflow characteristics.

All Titus fan powered terminals with ECM motors are provided with a factory installed PWM controller. The PWM voltage signal is calibrated to provide 100% fan at full voltage (10.0V) and minimum fan at minimum voltage (1.0V). The calibrated PWM allows the ECM motor to operate as programmed by Titus regardless of what manufacturer's DDC controller provides the voltage signal to the PWM controller. This ensures the pressure independent operation of the motor with any DDC controller. The PWM signal can also be controlled manually using a dial pot much like a SCR on a standard PSC motor.

The TITAN ECM Programming Process extends from the lab to the ISO 9001:2000 certified factories where individual ECM motors are programmed with the appropriate ECM program for each order.

### Specifications

PTFS .....	35
ATFS .....	35
DTFS .....	35

- Two casings for easy design layout.
- Pressure independent primary airflow control.
- AeroCross™ multi-point inlet velocity sensor with center averaging.
- Energy-efficient fan motor, permanent split capacitor type, mounted with vibration isolators.
- Optional TITAN™ programmed ECM motor provides ultra-high efficiency, pressure independent operation.

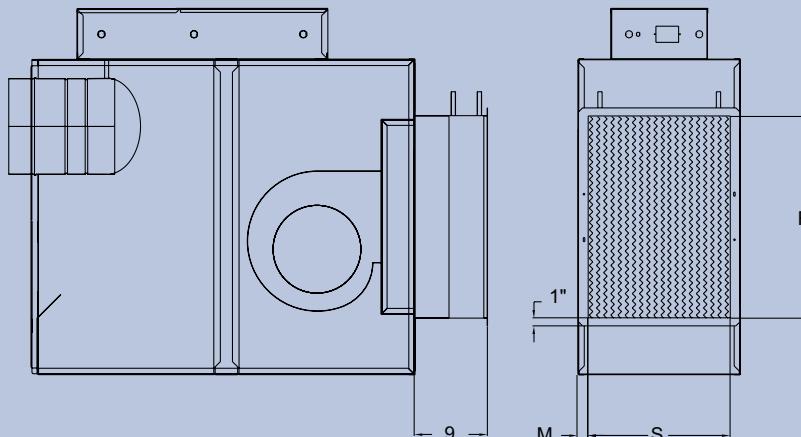

- Adjustable SCR fan speed control with minimum voltage stop.
- Single point electrical, pneumatic main, and thermostat connections.
- EnviroLoc, natural fiber insulation, covered to prevent air erosion, meets requirements of NFPA 90A and UL 181.
- 20-gauge galvanized steel casing.
- Rectangular discharge opening is designed for flanged duct connections.
- Centered, rectangular discharge opening is designed for flanged duct connections.
- Top and bottom access panels can be removed for service.

**Hot Water Coil Section****Standard Features**

- 1/2-inch copper tubes.
- Aluminum ripple fins.
- Connections: Male solder.  $\frac{5}{8}$ -inch for both 1- and 2-row. Left or right hand connections.
- Galvanized steel casing.
- Flanged duct connection.
- Coil is installed at discharge of unit.

**Coil Rows**

- 1-Row
- 2-Row

**Supply Voltage**

- 120V, 1 ph, 60 Hz.
- 208/240V, 1 ph, 60 Hz.
- 277V, 1 ph, 60 Hz.

**Hot Water Coil Section (Discharge Mounted)**

Unit Size	M (1-Row)	M (2-Row)	R	S
B, C	1	1	20 1/2	12 1/2
D, E	1	1 1/4	25	17 1/2

**Electric Coil Section****Standard Features**

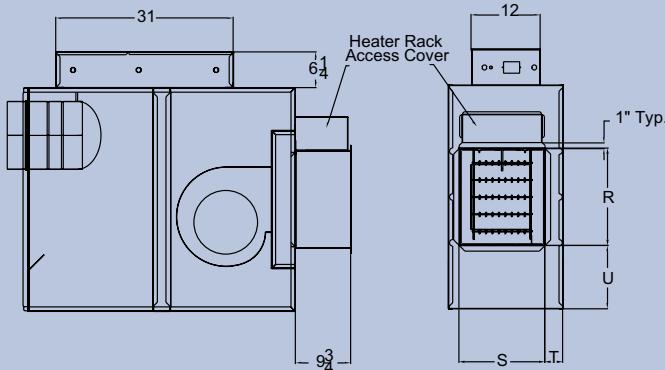

- Automatic reset thermal cutouts, one per element.
- Single point electrical connection for entire unit, including coil.
- Positive pressure air flow switch.
- Flanged duct connection.
- Coil is installed at discharge of unit.
- Preset P/E switches with pneumatic units.
- 80/20 nickel chrome element wire
- Transformers (analog and digital models only)

**Options**

- Mercury contactors.
- Fuse block.
- Disconnect switch, door interlock type.
- Manual reset cutout.
- Dust tight construction.

**Supply Voltage**

- 208V, 1 ph, 60 Hz.
- 240V, 1 ph, 60 Hz.
- 277V, 1 ph, 60 Hz.
- 208V, 3 ph, 60 Hz.
- 480V, 3 ph, 60 Hz. (4 wire wye only)

**Electric Coil Section (Discharge Mounted)**

Unit Size	U	R	S	T
B, C	11 3/8	14 1/2	11 1/2	2 3/8
D, E	11	17	15	3 1/8

Note: R and S are inside dimensions.

**Additional Accessories (Optional)**

- Induced air filter, 1-inch thick disposable construction type.
- Fan disconnect switch (not available on units with optional electric coils).
- 1-inch Liner.
- EnviroLoc Liner.
- Fibre-Free Liner.
- SteriLoc Liner.
- Fan unit fusing.
- Hanger brackets.
- Camlocks on fan access door.

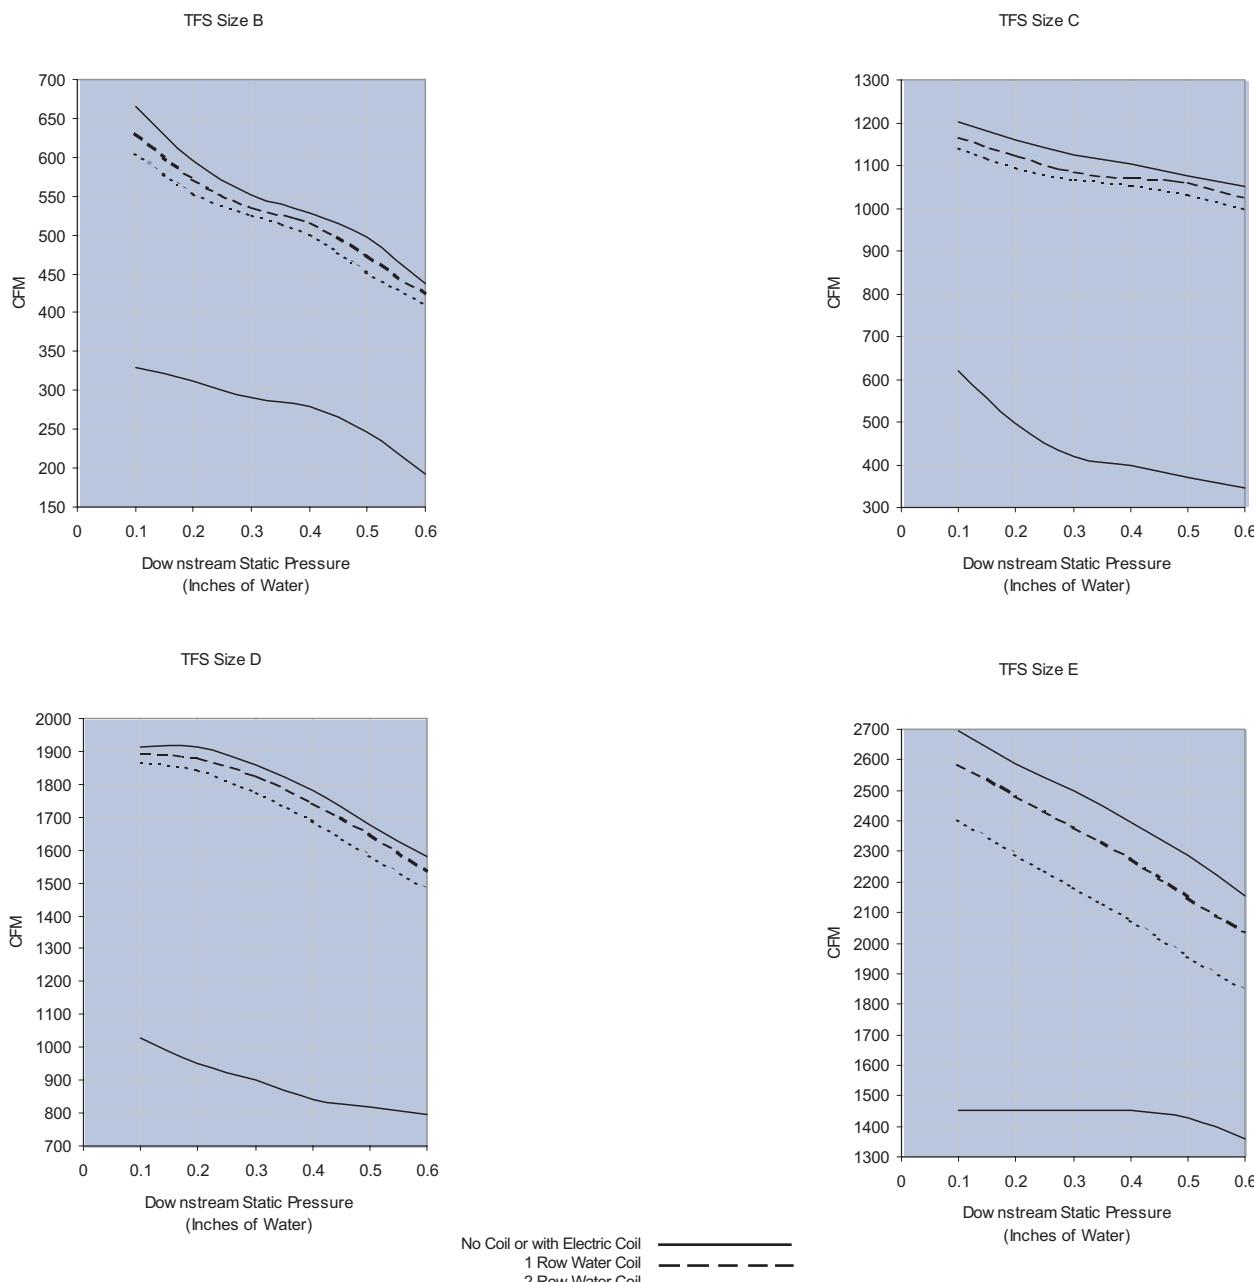

**Electrical Data**

Unit Size	Motor hp	120/1/60 FLA	208/240/1/60 FLA	277/1/60 FLA
B	1/6	2.3	0.9	0.8
C	1/4	4	1.8	1.4
D	1/3	8.5	3.6	3
E	3/4	8.6	4.2	4.5

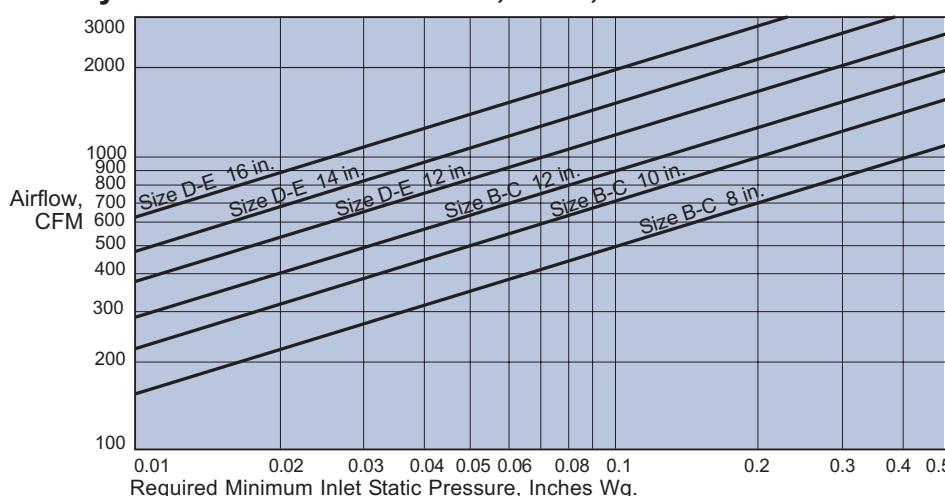

FLA = Full Load Amperage, as tested in accordance with UL 1995.

All fan motors are single phase, same voltage as electric coil (when supplied), with exception that 277V motors are used with 480V, 3 phase coils (4 wire wye).

## Models: PTFS, ATFS, DTFS • Airflow vs. Downstream Static Pressure

## Primary Air Inlet Pressure • PTFS, ATFS, DTFS

**Note:** For selection procedure, see the *Engineering Guidelines* and the topic, 'Sizing Basic Terminals from Capacity Tables'.

## Models: PTFS, ATFS, DTFS • Water Coil Heating Capacity (MBH)

- Hot water capacities are in MBH.
- Data are based upon 180° F entering water 65° F entering air.
- HD (head) loss is in feet of water.
- Tables are based upon a temperature difference of 115° F between entering air and entering water. For other temperature differences multiply MBH values by factors below.
- Air temperature rise = 927 x MBH/CFM.
- Connections: All coils are  $\frac{5}{8}$ -inch O.D. male solder.
- Coils are not for steam application.
- Water enters at lower coil connection to prevent air entrapment.

- N/A in a space denotes a minimum inlet static pressure greater than 0.5 inch at rated airflow.
- Outlet ΔPs, the difference in static pressure from the terminal discharge to the room, is 0.25 inch.
- Radiated sound power is the noise transmitted through the casing walls.
- Sound power levels are in decibels, re 10<sup>-12</sup> watts.
- Ratings in accordance with ARI Standard 880-98 and certified to ARI.

A Participating Corporation  
in the ARI 880  
Certification Program

- N/A in a space denotes a minimum inlet static pressure greater than 0.5 inch at rated airflow.
- Outlet ΔPs, the difference in static pressure from the terminal discharge to the room, is 0.25 inch.
- Radiated sound power is the noise transmitted through the casing walls.
- Sound power levels are in decibels, re 10<sup>-12</sup> watts.
- Ratings in accordance with ARI Standard 880 and certified to ARI.

A Participating Corporation in the ARI 880 Certification Program

## Fan Powered Series Type

### Quiet Operation

#### Models:

##### PTFS-F

- Pneumatic Control

##### ATFS-F

- Analog Control

##### DTFS-F

- Digital Control

### Performance Data

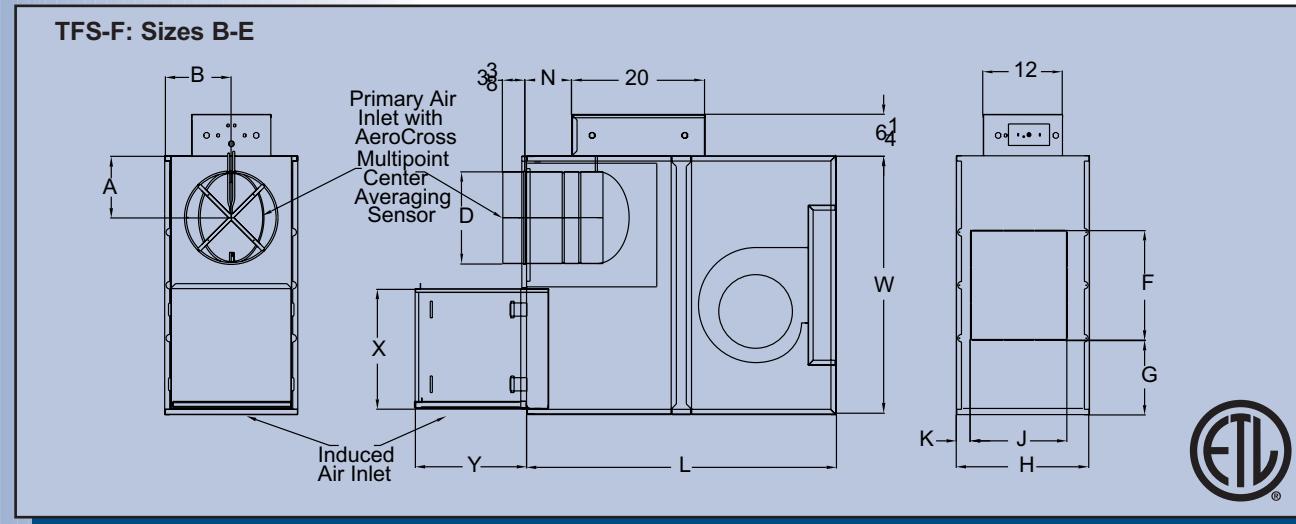

PTFS-F .....	24
ATFS-F .....	24
DTFS-F .....	24

### Specifications

PTFS-F .....	35
ATFS-F .....	35
DTFS-F .....	35

- Optional TITAN™ programmed ECM motor provides ultra-high efficiency, pressure independent operation.
- Adjustable SCR fan speed control with minimum voltage stop.
- Single point electrical, pneumatic main, and thermostat connections.
- EnviroLoc, natural fiber insulation, covered to prevent air erosion, meets requirements of NFPA 90A and UL 181.
- 20-gauge galvanized steel casing.
- Rectangular discharge opening is designed for flanged duct connections.
- Centered, rectangular discharge opening is designed for flanged duct connections.
- Top and bottom access panels can be removed for service.

### Hot Water Coil Section

#### Standard Features

- 1/2-inch copper tubes.
- Aluminum ripple fins.
- Connections: Male solder.  $\frac{5}{8}$ -inch for both 1- and 2-row. Left or right hand connections.
- Galvanized steel casing.
- Flanged duct connection.
- Coil is installed at discharge of unit.

#### Coil Rows

- 1-Row
- 2-Row

#### Hot Water Coil Section (Discharge Mounted)

Unit Size	M (1-Row)	M (2-Row)	R	S
B, C	1	1	20 1/2	12 1/2
D, E	1	1 1/4	25	17 1/2

Note: R and S are inside dimensions.

### Electric Coil Section

#### Standard Features

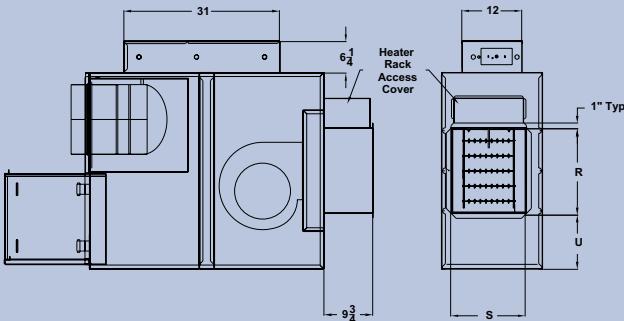

- Automatic reset thermal cutouts, one per element.
- Single point electrical connection for entire unit, including coil.
- Positive pressure air flow switch.
- Flanged duct connection.
- Coil is installed at discharge of unit.
- Preset P/E switches with pneumatic units.
- 80/20 nickel chrome element wire
- Transformers (analog and digital models only)

#### Options

- Mercury contactors.
- Fuse block.
- Disconnect switch, door interlock type.
- Manual reset cutout.
- Dust tight construction.

#### Supply Voltage

- 208V, 1 ph, 60 Hz.
- 240V, 1 ph, 60 Hz.
- 277V, 1 ph, 60 Hz.
- 208V, 3 ph, 60 Hz.
- 480V, 3 ph, 60 Hz. (4 wire wye only)

#### Electric Coil Section (Discharge Mounted)

Unit Size	U	R	S	T
B, C	11 3/8	14 1/2	11 1/2	2 3/8
D, E	11	17	15	3 1/8

Note: R and S are inside dimensions.

### Additional Accessories (Optional)

- Induced air filter, 1-inch thick disposable construction type.
- Fan disconnect switch (not available on units with optional electric coils).
- 1-inch Liner.
- EnviroLoc Liner.
- Fibre-Free Liner.
- SteriLoc Liner.
- Fan unit fusing.
- Hanger brackets.
- Camlocks on fan access door.

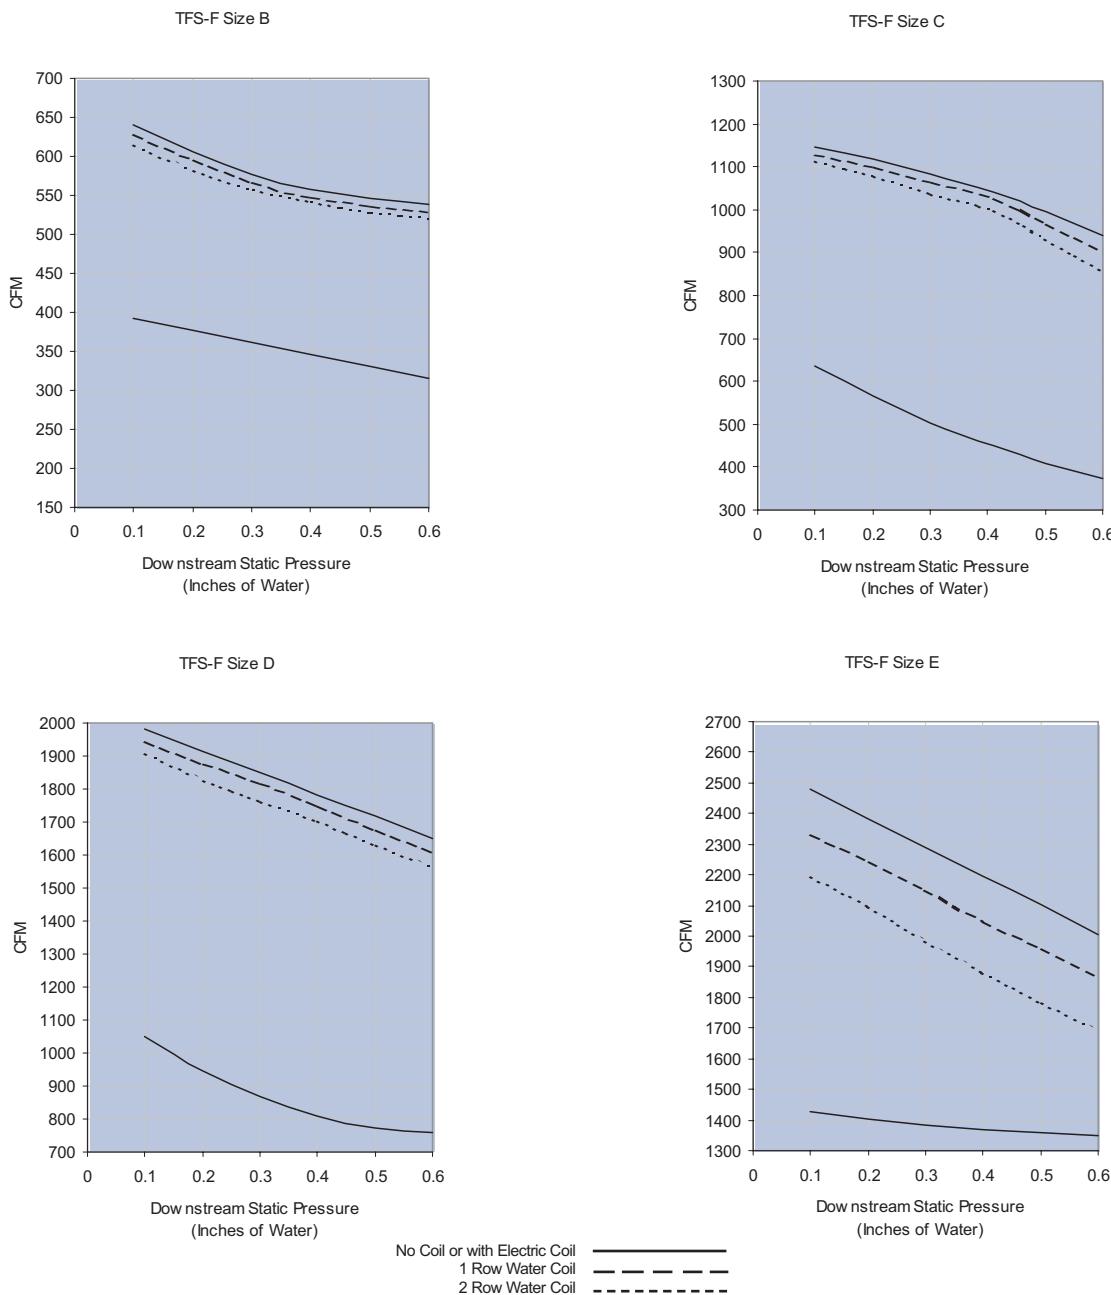

#### Electrical Data

Unit Size	Motor hp	120/1/60 FLA	208/240/1/60 FLA	277/1/60 FLA
B	1/6	2.3	0.9	0.8
C	1/4	4.0	1.8	1.4
D	1/3	8.5	3.6	3.0
E	3/4	8.6	4.2	4.5

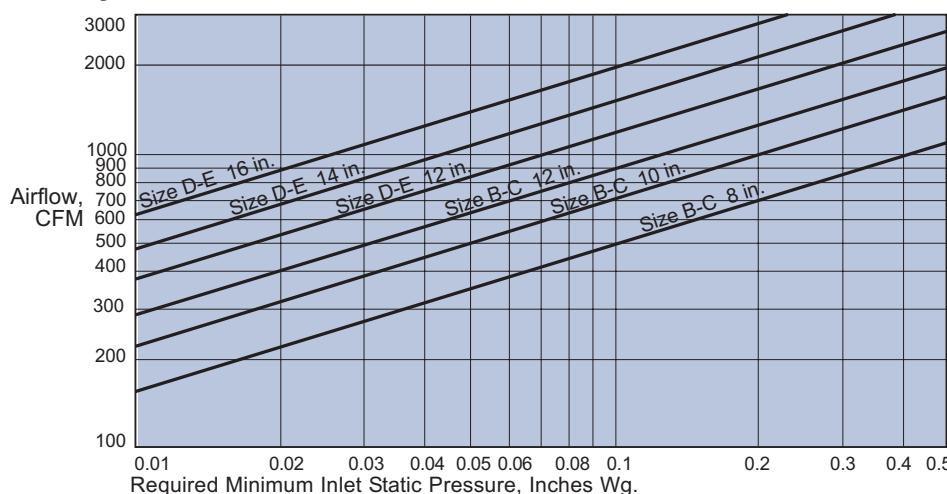

FLA = Full Load Amperage, as tested in accordance with UL 1995.

All fan motors are single phase, same voltage as electric coil (when supplied), with exception that 277V motors are used with 480V, 3 phase coils (4 wire wye).

## Models: PTFS-F, ATFS-F, DTFS-F • Airflow vs. Downstream Static Pressure

## Primary Air Inlet Pressure • PTFS-F, ATFS-F, DTFS-F

**Note:** For selection procedure, see the *Engineering Guidelines* and the topic, 'Sizing Basic Terminals from Capacity Tables'.

**Models: PTFS-F, ATFS-F, DTFS-F • Water Coil Heating Capacity (MBH)**

- Hot water capacities are in MBH.
- Data are based upon 180° F entering water 65° F entering air.
- HD (head) loss is in feet of water.
- Tables are based upon a temperature difference of 115° F between entering air and entering water. For other temperature differences multiply MBH values by factors below.
- Air temperature rise = 927 x MBH/CFM.
- Connections: All coils are  $\frac{5}{8}$ -inch O.D. male solder.
- Coils are not for steam application.
- Water enters at lower coil connection to prevent air entrapment.

**Correction factors for other entering conditions:**

- N/A in a space denotes a minimum inlet static pressure greater than 0.5 inch at rated airflow.
- Outlet ΔPs, the difference in static pressure from the terminal discharge to the room, is 0.25 inch.
- Radiated sound power is the noise transmitted through the casing walls.
- Sound power levels are in decibels, re  $10^{-12}$  watts.
- Ratings in accordance with ARI Standard 880-98 and certified to ARI.

A Participating Corporation in the ARI 880 Certification Program

Application data based upon factors found in ARI Standard 885-98:

- Ceiling Type - Mineral Fiber Tile -  $\frac{5}{8}$  inch, 20 pounds per cubic foot density.
- Min. Ps is the minimum static pressure required to achieve rated airflow.
- Dash (-) in space denotes NC level less than 20.

Space Effect	5	6	7	8	9	10	
Total dB reduction	25	28	39	53	59	40	

Application Data are based upon factors found in ARI Standard 885-98 plus flow division as follows:

- Flex Duct - Vinyl Core Flex
- End Reflection - 8-inch Termination to Diffuser
- Fiberglass Flex Duct - 5-foot length, 1-inch Duct work
- Room Size - 2400 Cubic Feet Room, 5 feet from sound source
- Min.  $P_s$  is the minimum static pressure required to achieve rated airflow.
- Dash (-) in space denotes NC level less than 20.

The following dB adjustments are used, per ARI 885-98, for the calculation of NC above 300 CFM.

	Octave Bands						
	2	3	4	5	6	7	
300-700 CFM	2	1	1	-2	-5	-1	
Over 700 CFM	4	3	2	-2	-7	-1

- N/A in a space denotes a minimum inlet static pressure greater than 0.5 inch at rated airflow.
- Outlet ΔPs, the difference in static pressure from the terminal discharge to the room, is 0.25 inch.
- Radiated sound power is the noise transmitted through the casing walls.
- Sound power levels are in decibels, re 10<sup>-12</sup> watts.
- Ratings in accordance with ARI Standard 880 and certified to ARI.

# Suggested Specifications

## Series Flow Fan Powered Terminals

### Series Flow (Constant Volume) Fan Powered Terminals

#### TFS Basic Unit, Quiet

See Section S for Control Specifications.

1. Furnish and install TITUS Model (P)(A)(D)TFS series flow fan powered terminals of the sizes and capacities shown on the plans. Space limitations shall be reviewed carefully to ensure that all terminals will fit the available space.
2. Terminals should be certified under the ARI Standard 880 Certification Program and carry the ARI Seal. Non-certified terminals may be submitted after testing at an independent testing laboratory under conditions selected by the engineer in full compliance with ARI Standard 880. These tests must be witnessed by the engineering consultant with all costs to be borne by the terminal manufacturer. Testing does not ensure acceptance.
3. The terminal shall be designed, built, and tested as a single unit including motor and fan assembly, primary air damper assembly, water or electric heating coils, and accessories as shipped. Unit shall ship as a complete assembly requiring no field assembly (including accessories). All electrical components shall be UL listed and installed in accordance with the UL Standard 1995. Electrical connection shall be single point. All electrical components, including low voltage controls, shall be mounted in sheet metal control enclosures. The entire terminal shall be ETL listed as a complete assembly.
4. The terminal casing shall be minimum 20-gauge galvanized steel, internally lined with ½-inch matte faced, natural fiber insulation that complies with UL 181 and NFPA 90A. The liner shall comply with ASTM G21 and G22 for fungi and bacterial resistance. The casing shall be designed for hanging by sheet metal brackets. The terminal shall have a round duct collar for the primary air connection and a centered rectangular discharge suitable for flanged duct connection.
5. The terminal casing shall have top and bottom access panels, which allows removal of fan assembly and servicing of terminal without disturbing duct connections.
6. The fan shall be constructed of steel and have a forward curved, dynamically balanced wheel with direct drive motor. The motor shall be suitable for 120, 208, 240, or 277 volt, 60 cycle, single-phase power. The motor shall be of energy efficient design, permanent split capacitor type, with integral thermal overload protection and permanently lubricated bearings, and be specifically designed for use with an SCR for fan speed adjustment. Fan assembly shall include a tuned spring steel suspension and isolation between motor and fan housing.
7. The terminals shall utilize a manual SCR, which allows continuously adjustable fan speed from maximum to minimum, as a means of setting fan airflow. Setting fan airflow with any device that raises the pressure across the fan to reduce airflow is not acceptable. The speed control shall incorporate a minimum voltage stop to ensure that the motor cannot operate in a stall mode.
8. The primary air damper assembly shall be heavy gauge steel with shaft rotating in Delrin self-lubricating bearings. Nylon bearings are not acceptable. Shaft shall be clearly marked on the end to indicate damper position. Stickers or other removable markings are not acceptable. The damper shall incorporate a mechanical stop to prevent overstroking, and a synthetic seal to limit close-off leakage to the maximum values shown in the following table. Provide an AeroCross™ four point, center-averaging differential pressure airflow sensor. A sensor that delivers the differential pressure signal from one end of the sensor is not acceptable. Balancing taps and airflow calibration charts shall be provided for field airflow measurements.

NC40	74	68	61	59	58	57

### Maximum Radiated Sound Power Level

Discharge	Octave Band					
	2	3	4	5	6	7
NC35	80	77	69	73	74	73
NC40	84	80	72	75	75	74

### Maximum Discharge Sound Power Level

9. The sound levels shall not exceed the octave band sound power levels indicated in the table above. Sound performance shall be ARI certified. If NC is provided instead of octave band sound power data, the radiated and discharge path attenuation function for the specified NC shall be based upon factors found in ARI Standard 885-98, Appendix E. No additional attenuation factors shall be deducted from the sound power.

### TFS-F Fantom IQ™

(Substitute paragraphs 1, 5 and 9 below for paragraphs 1 and 5 in the TFS Basic Unit Specification)

1. Furnish and install TITUS Model (P)(A)(D)TFS-F Fantom IQ series flow fan powered terminals of the sizes and capacities shown on the plans. Space limitations shall be reviewed carefully to ensure that all terminals will fit the available space.
5. The terminal casing shall have two top and two bottom access panels, which allows removal of fan assembly and servicing of terminal without disturbing duct connections. The terminal shall have internal and external attenuators factory installed. The external attenuator shall be shipped internal to the unit to protect it from shipping damage. The external attenuator shall be slid into the operation position and secured without the need for additional screws. Factory provided attenuators that require field installation are not acceptable.

# Suggested Specifications

(continued)

## ECM Motor

(Substitute paragraphs 6 and 7 below for paragraphs 6 and 7 in the TFS Basic Unit Specification)

6. Fan motor assembly shall be forward curved centrifugal fan with a direct drive motor. Motors shall be General Electric ECM variable-speed dc brushless motors specifically designed for use with single phase, 277 volt, 60 hertz electrical input. Motor shall be complete and operated by a single phase integrated controller/inverter that operates the wound stator and senses rotor position to electronically commutate the stator. All motors shall be designed for synchronous rotation. Rotor shall be permanent magnet type with near zero rotor losses. Motor shall have built-in soft start and soft speed change ramps. Motor shall be able to be mounted with shaft in horizontal or vertical orientation. Motor shall be permanently lubricated with ball bearings. Motor shall be directly coupled to the blower. Motor shall maintain a minimum of 70 percent efficiency over its entire operating range. Provide a motor that is designed to overcome reverse rotation and not affect life expectancy.
7. The terminal unit manufacturer shall provide a factory installed PWM controller for either manual or DDC controlled fan CFM adjustment. The manual PWM controller shall be field adjustable with a standard screwdriver. The remote PWM controller shall be capable of receiving a 0-10 Vdc signal from the DDC controller (provided by the controls contractor) to control the fan CFM. When the manual PWM controller is used, the factory shall preset the fan CFMs as shown on the schedule.

## Accessories

### Steri-Loc Liner

(Substitute paragraph 4 below for paragraph 4 in the TFS Basic Unit Specification)

4. The terminal casing shall be minimum 20-gauge galvanized steel, internally lined with non-porous, sealed liner, which complies with UL 181 and NFPA 90A. Insulation shall be 4 pound density. All cut edges must be sealed from the airstream using barrier strips. Liners made of Tedlar, Silane, or woven fiberglass cloth are not acceptable. Insulation shall be equivalent to Titus Steri-Loc. Double wall lining is acceptable. The terminal shall have a round duct connection and a rectangular discharge suitable for flanged duct connection. The casing shall be designed for hanging by sheet metal straps.

### Fibre-Free Liner

(Substitute paragraph 4 below for paragraph 4 in the TFS Basic Unit Specification)

4. The terminal casing shall be minimum 20-gauge galvanized steel, internally lined with engineered polymer foam insulation, which complies to UL181 and NFPA 90A. Insulation shall be 1 1/2 pound density, closed cell foam. Exposed fiberglass is not acceptable. The insulation shall be mechanically fastened to the unit casing. The casing shall be designed for hanging by sheet metal brackets.

### Hot Water Heating Coils

4. Hot water heating coils shall be enclosed in a minimum 20-gauge galvanized steel casing, with flanged construction for attachment to metal ductwork. Coils shall be factory installed on the terminal. Fins shall be rippled and corrugated heavy gauge aluminum, mechanically bonded to tubes. Tubes shall be copper with minimum wall thickness of 0.016 inch, with male solder header connections. Coils shall be leak tested to 300 psi, with minimum burst pressure of 1800 psi at ambient temperature. Number of coil rows and circuits shall be selected to provide performance as required per the plans. Coil performance data shall be based on tests run in accordance with ARI Standard 410.

# Suggested Specifications

(continued)

## Accessories, continued.

### Electric Heating Coils

1. Electric coils shall be supplied and installed on the terminal by the terminal manufacturer. Coil shall be integral with the terminal. Elements shall be 80/20 nickel chrome, supported by ceramic isolators a maximum of 3.5 inches apart, staggered for maximum thermal transfer and element life, and balanced to ensure equal output per step. The integral control panel shall be housed in a NEMA 1 enclosure, with hinged access door for access to all controls and safety devices.
2. Electric coils shall contain a primary automatic reset thermal cutout, a secondary replaceable heat limiter per element, differential pressure airflow switch for proof of flow, and line terminal block. Coil shall include an integral door interlock type disconnect switch, which will not allow the access door to be opened while power is on. Non-interlocking type disconnects are not acceptable. All individual components shall be UL listed or recognized.
3. (Optional) Electric coils shall include (manual reset secondary thermal cutouts), (line fusing), (mercury contactors) mounted and wired within the control enclosure.
