

Internals

The internals, consisting of the upper and lower distributor assemblies, assure proper distribution of fluid in the tanks during all cycles. The upper distributors are open pipes designed to force the inlet flow upward against the tank head. The lower distributors have slotted distributor heads or pipes with fine-slots to force even flow distribution and retain the resin. The slot area exceeds the area of the discharge pipe. The types of under drains found in steel tanks are Multi Point, Hub and Lateral and Header and Lateral.

PVC INTERNALS							
TANK SIZE	PIPE SIZE	UPPER DISTRIBUTOR	PN	BRINE DISTRIBUTOR	PN	LOWER DISTRIBUTOR	PN
20"x54"	2" NPT	Single Point	100341	NA	NA	Two point	500000-1
24" x 54"	2" NPT	Single Point	100341	NA	NA	Two point	500000-1
