| Model | FM | FSM |
|-----------------------------|-------------------------|------------------|
| Sizes | 1/2", 3/4" | 1/2", 3/4" |
| Connections | NPT, SW | NPT, SW |
| Body Material | Fabricated Carbon Steel | Forged Steel |
| PMO Max. Operating Pressure | 720 PSIG | 600 PSIG |
| Pressure/Temperature Rating | 720 PSIG @ 508°F | 600 PSIG @ 500°F |

FSM Manifold

TYPICAL APPLICATION

The **FM/FSM Manifolds** are used for steam distribution to the tracing system and for condensate collection. Typically used in chemical plants, petrochemical plants, textile industries, rubber plants and general industry. Manifolding your distribution and condensate collection system not only cuts down on installation and maintenance time, but also provides freeze protection.

DESCRIPTION FM

The **FM Manifold** is equipped with threaded or socket welded mount holes for ease of installation. Condensate collection manifolds are provided with a built-in siphon tube to minimize bi-phase flow, which reduces water hammer, and allows flash steam space to prevent isolation station freeze damage.

DESCRIPTION FSM

The **FSM Manifold** has a sealing system that utilizes an austenitic stainless steel piston that slides into two rings, one upper made of reinforced graphite, and one lower made of graphite interposed with thin stainless steel plates. The sealing surface is the surface of the piston. By tightening the bonnet nuts that are on the spring washers, a constant load on the upper ring is obtained, securing a tight seal to atmosphere. The same load, through the upper ring and the lantern, is applied to the lower ring that by expanding toward the body wall and toward the surface of the piston when the valve is in the closed position, ensures a perfect seal of the valve against the flow of the fluid.

FEATURES

- Compact design saves valuable plant space
- Available in 4, 6, 8 & 12 branch designs
- Available with preassembled steam trap stations
- Standard designs or custom built manifolds available
- Provides freeze protection
- Cuts down on installation and maintenance time
- On <u>FSM Model</u> valve bonnets are long neck type to allow for installation of insulation, keeping temperatures low
