

MUSICAL FIDELITY

MVX.2 Preamplifier

[Print This Page](#)

OVERVIEW

Designed for tonal purity and sound resolution, the MVX.2 is an ultra-high quality studio standard preamp with several Musical Fidelity innovations.

These include the hybrid bi-polar mosfet phono stage, and the output stage, which is a pure Class A line amp driving a studio-spec line input matching transformer.

The power supply uses two-stage choke regulation to ensure that ripple current noise is virtually non-existent on the power supply line. To ensure that no noise reaches the active electronics, each stage is separately regulated with a series shunt regulator circuit exclusive to Musical Fidelity.

FEATURES & BENEFITS

SPECIFICATIONS

Phono MC	80 μ V
Phono MM	2mV
Line inputs & Sensitivity	150mV Tape, Aux, CD
