## Nu-Vista Loudspeaker Cables

[Print This Page](#)

### OVERVIEW

In addition to a core of POCC copper, the Nu-Vista loudspeaker cables have a unique internal structure and screening system which ensures optimal transmission of information. The cable sleeving and insulation are sonically absorbent, to ensure that the cables are completely non-microphonic, as well as being substantially immune to RFI.

These are advanced-design cables with very low resistance, inductance and capacitance, which allow any power amp to deliver its best into the loudspeaker.

Nu-Vista loudspeaker cables are not a limited edition; they are available to the market at large.

### FEATURES & BENEFITS

**Very low resistance.** Helps to maintain the power amplifier's damping factor. Results in greatly improved bottom end speed, tightness, control and extension.

---

**Advanced, complex cable construction.** Hugely increased dynamic range due to reduced conductor and dielectric losses.

---

**Pure OCC copper.** Best sonic results with high definition systems.

---

### SPECIFICATIONS

**Conductive material** POCC copper

---

**Lengths available** 2, 3, 5 & 7 metres  
Supplied in made-up pairs

---
