

P270.2 Power Amplifier

[Print This Page](#)

OVERVIEW

Using the same front-end circuitry as the SA470, the P270.2 offers dramatic imaging, sweetness, power delivery and bass end performance.

It is a dual mono amplifier, each channel having its own independent power supply.

While it could be considered as a 'scaled down' version of the A370.2, with 60% of the larger amp's output capacity, the P270.2 is a powerful amp in its own right, with a combination of low feedback circuit topography, generous power supply and strong bias into Class A that is unique to Musical Fidelity.

FEATURES & BENEFITS

SPECIFICATIONS

Power output per channel at 8 Ohms, <1%THD 150 watts

Sensitivity 750mV
