

850 GALLON SEPTIC TANK

- 850 Gallon Capacity
- UV Protected
- Single or Double Chamber
- High-Strength Design
- Almost 1" Wall Thickness
- Above Ground or Underground
- Cut-Outs for any size connection
- 90" Long x 59" Wide x 61" High

Omega's expansion into septic tanks is the natural maturity of our technology meeting customer demand. Our tremendous success with water and fuel tank storage allowed us to continue advancing into other liquid storage products. The **850** Gallon Septic Tank is our entry into this line of products and already is out-performing industry standards.

Omega's septic tanks are extremely durable and are built to withstand the harsh environments experienced both above and in the ground. Unaffected by any of the caustic chemicals that are sent to the tank, Omega septic tanks will not crack or react to any environmental challenges. These tanks are light enough to be loaded into a pick-up truck by only two people, placed at the site, and quickly installed for lower installation and transportation costs. Designed for aboveground AND in-ground installation Omega septic tanks offer maximum flexibility for customer needs.

Omega septic tanks use the same high-performance cross-linked resins used in the water and fuel tanks, and contain the same UV resistance and durability but with a heavier wall. This UV resistance innovation of Omega tanks comes from the highest use of TiO₂ (Titanium Dioxide) in the outer shell, which provides a superior barrier to the damaging Ultra Violet rays of the sun. UV rays will break down and deteriorate the outer walls of lesser quality tanks.
