

Coat-O-Matic Series

The **COAT-O-MATIC** finishes suit jackets, raincoats, overcoats, jackets, blazers, parkas and more. It is a combination of a form finisher and collar press. The unique head and buck was originally developed to form and shape collars on jackets for the tailored garment industry, this was then modified for the application for drycleaners. Advanced design incorporating a special head and buck shape allows any operator to quickly dress and properly set collars to produce consistently superior quality jackets. Minimum operator skills are required which de-skill this operation and reduce your labor costs. The **COAT-O-MATIC** is now standard with pneumatic front and rear clamps.
