

● **Blower Toppers/Tensioners**

We are pleased to introduce our new economically priced **TOPMASTER TENSIONING PANTS FINISHER** the perfect machine to de-wrinkle khakis, dress pants, uniform rentals, pleated pants and jeans in both dry-clean and wet-wash applications. The new **TOPMASTER** incorporates a state-of-the-art programmable microprocessor control that allows you to customize up to 10 programs for any style garment or fabric. The programmed cycle automatically starts by closing the last paddle or engaging the last pleat paddle. Ergonomically designed for easier and faster loading and unloading with an innovative air operated clamp-on pressure system to impart a solid crease on a pleat and automatically tension legs.

The **TOPMASTER** is designed for the traditional dry cleaning plant when an operator pressing with a traditional legger/utility requires a center crease or as a stand alone unit for non-creased khaki style pants or jeans.
