

Electronic Cabinets

Control and monitor valuable assets using high-security, electronically-controlled cabinets.

Positions are assigned to one or more users based on pre-determined rules.

Control Keys are secured in locked cylinders, where they remain unless electronically released after a user's ID has been authenticated.

Lockers

Standard or custom-built electronically-controlled lockers can be modified any number of ways to accommodate the needs of your facility.

Firearms, medical equipment, shop tools, expensive electronics, etc. – our locker solutions are in place around the world controlling local and distributed access to a range of high-value assets in all shapes and sizes.

SAM "Control Cabinets" manage and monitor multiple expansion lockers for added storage capacity. Individual lockers are accessed by authorized User ID.

User Identification Devices can be added for extra security.
