The display on the Key Systems GFMS device reads:

```
JOHN SMITH
2 ASSETS OUT
KEY OUT
CARD OUT
```

Key Systems GFMS

Exit Control

Our automated Exit Control solutions instantly check for assets an employee has failed to return to any and all of the facility's GFMS™ Security Asset Managers™.

Key Systems, Inc. Exit Control solutions can be integrated into a facility's existing electronic exit devices, and provide notification by display, email, text messaging, or central monitoring.

SWATBox™

Securely store important physical assets (keys, key cards, touch memory key fobs) in strategic locations in and around the facility.

Wall or surface-mounted, the SWATBox™ can be opened remotely using any standard web browser, or locally using its keypad (authorized PIN entry).

Access Control

Whether it's an entire building, or a single door, our affordable, remote Access Control solutions restrict entry via User ID (PIN entry, cards, proximity, biometric). And because our system is always live, notification is instant if and when unauthorized access is attempted.
