Manufacturing Programme

Solid Film Lubricants

- HMP films
- Solvent-based solid film lubricants
- Water-based solid film lubricants

molecular polymers (HMP). They are preferably applied damage. At the same time they prevent cold welding by dipping, and when dry create a tenacious, non-slip an- (e.g. with stainless steel), aid flow during moulding and tifriction film. The main field of application of HMP films prevent stick-slip in the case of slow, oscillating moveis the coating of screws, where reduced friction and the ments. In addition they guarantee optimum threaded elimination of coating thickness variation is crucial. How-connections. ever they have proven their value over a wide range of In many cases customised coating can be the most ecoother lubrication applications.

mulated to reduce both friction and wear in many tribological applications. They form highly effective dry lubri- FUCHS LUBRITECH has the capability to offer SFL coalubricated parts ready for assembly. They are charactecome tacky thus making the coated parts clean and ea- cally and on time. sy to handle.

FUCHS LUBRITECH Solid Film Lubricants (SFL) give outstanding lubricating and protective properties, they also

Approvals

gleitmo 925: Volvo gleitmo 935: BAM

gleitmo 985: VW, ISEGA-Approval for applications in food industry

Release Agents - Cleaner and release agents for bitumen and concrete in building construction/civil engineering and pre-cast concrete plants.

Adhesive Lubricants - Highly graphited lubricants for a wide application range. Also recommended for high-temperature lubrication.

Lubricating Greases - Different greases for plain and anti-friction bearings, rail-, wheel flange and switch lubricants and food grade greases.

Lubricating Fluids - Lubricating fluids for lifetime and loss lubrication of chains, wire ropes and compressed air tools.

Pastes and Grease Pastes - MoS₂-pastes, white lubricating pastes, grease pastes and high-temperature pastes.

Solid Film Lubricants - Solvent or water-based lubricants reducing friction and wear. Extremely resistant against pressure, high and low temperatures.

Aerosols - Sprayable release agents, adhesive lubricants, lubricating greases and fluids, pastes, grease pastes and solid film lubricants.

Metal Forming Lubricants - Water- and non-water-miscible lubricants for hot forming. Die casting release agents and auxiliary casting materials.

Chemo-technical Products - Solid lubricants as powder, corrosion protection products, cleaner and thinner for numerous application areas.

Application Equipment - One- and two-handed patented grease guns ("System Reiner"), hand lever grease guns, spray nozzles and equipment for die-casting technology.

GLASOL - Lubricants for the Glass Industry - Cutting oils, grinding fluids, separating agents and coolants for use in the manufacture of flat/plate glass, container glass and optical glass.
