

/ DOCKING STATION FOR THE IPOD

THE BRIDGE

Of course you can plug your iPod into any music system, but why would you want to? You know the problem. Every time you need to adjust your playlist or choose a new one, you have to undock your iPod and the music abruptly stops. Bummer (as would-be DJs of a certain age might put it). But The Bridge changes that. It's a universal iPod dock that connects directly to most Harman Kardon A/V receivers and the DMC 1000. And you can control it with the AVR or DMC remote, guided by on-screen or front-panel menus that you can read from across the room. Let the (gloriously uninterrupted) music begin.
