HOVER SPEAKER FOUNDATIONS™

The first speaker stand designed to meet Dolby Laboratories' specifications

While many people enjoy sound reproduced from speakers at ear level, the correct

positioning, according to Dolby Laboratories, is actually several feet above ear level.

Enter Hover Foundations. These heavy-duty cast iron and steel speaker stands are the

first ever that meet the placement guidelines of Dolby Laboratories. And they do so with

rugged construction designed to hold speakers up to 10 lbs. and include features such

as adjustable height and a concealed wire management path. Plus, Hover Foundations

include both straight and angled pillars for Dolby surround or direct listening.

Get ready to hear what Dolby Digital REALLY sounds like.

« Adjustable height allows speakers to

be placed at optimum listening level

« Includes top plates and brackets

to fit most small speakers

« Durable powder-coated black or

silver finish provides a modern look
