

## Large Diameter Stainless Steel Gas Connectors with ProCoat® Coating

### **Bigger Just Got Better.**

BrassCraft stainless steel gas connectors are known for superior quality and reliable performance. Our commitment to continual product innovation means we strive to make the best products even better. ProCoat large diameter gas connectors are no exception. BrassCraft combines superior corrosion resistance with ultra-flexible, high-flow stainless steel gas connectors to provide the industry's most advanced gas connector for large demand appliances.

BrassCraft's large diameter gas connectors are specifically engineered for gas appliances with large demand BTU requirements (up to 290,900 BTU/Hr) such as tankless and commercial water heaters, boilers, furnaces, manufactured housing, and pool heaters. Factory assembled to eliminate on-site pipe cutting, threading and assembly, our large diameter connectors increase efficiency of appliance installation, saving you time and money.

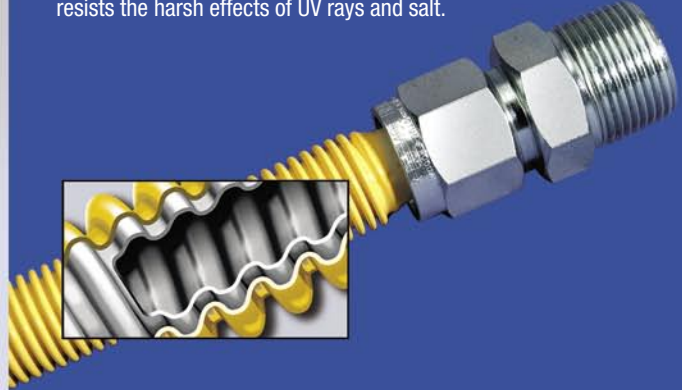

## A Safer, More Dependable Gas Connector

Combine the large diameter gas connector with a Safety+PLUS® large demand excess flow valve to provide a safer gas connection for your home and family. The patented Safety+PLUS large demand excess flow valve restricts gas flow to the appliance in the event of a gas line rupture or disconnection downstream of the valve. Gas flow is immediately restricted to a non-hazardous level (bypass flow) to avert the potential for a dangerous release of gas into the home. The valve will not reset until the gas line is properly repaired. Only once the line is repaired, the bypass flow pressurizes the gas line automatically resetting the valve to restore normal gas flow to the appliance.

## Superior Corrosion Resistance

BrassCraft's proprietary ProCoat coating resists corrosion from harsh household cleaning, plumbing repair and masonry products such as bleach, ammonia, solder flux and muriatic acid. ProCoat coating helps protect the stainless steel core from pinhole leaks and deterioration resulting from prolonged exposure to residue and vapors from these products. Approved for indoor and outdoor use, the ProCoat coating resists the harsh effects of UV rays and salt.

- **Greater Flexibility**

Manufactured from high-tensile strength stainless steel with deeper corrugations, BrassCraft connectors are less susceptible to work hardening and provide greater flexibility.

- **100% Leak Tested**

Each gas connector is factory leak tested prior to coating application to provide 100% core protection.

- **Approved for Indoor/Outdoor Use**

ProCoat coating resists the harsh effects of UV rays and salt (road and sea).
