MACKE. INDUSTRIAL

Vision Series

- The PA121 is an extremely versatile wide-dispersion, two-way loudspeaker system offering substantial power and value for a variety of professional applications that include primary sound reinforcement and supplementary fill for larger systems.
- The low-frequency transducer is a 12" woofer with a sturdy 3" voice coil. The high-frequency section combines a modified constant directivity horn having a 1" exit, coupled to a compression driver with a 1.75" diaphragm assembly.
- The system includes a high-level crossover network that features markedly lower (than conventional) induction values in series with the woofer. We call this innovation LICC (Low Impedance Compensated Crossover). The benefit is delay reduction, reduced phase shift and superior transient response. Dynamic high-frequency driver protection is accomplished with a fast-response filament resistor, chosen to complement the power curve of the driver. The PA121's crossover is easily bypassed for bi-amp or tri-amp (with the PA180SW) operation via an installer-accessible changeover block. Back panel indicators display the current system setting.
- The Mackie Industrial PA121 is a part of the VISION family of loudspeaker products including full-range, cost-effective, two-way loudspeakers and complementary subwoofer cabinets. The two-way enclosures have a trapezoidal footprint for easy array configuration. All enclosures are constructed using 19mm void-free, birch plywood and finished with a scratch-resistant black coating. Transducer components are protected from the environment by a heavy gauge metal grille. The VISION products are eminently suited for fixed installation, ready for suspension, via built-in M10 inserts with metal reinforcement and forged shoulder evebolt hardware.
- This Mackie Industrial product is covered by an exclusive, one-time, NO FAULT repair policy in addition to a five year limited warranty.

Two-Way Speaker System

PA121

Features

- 12" high-efficiency, 3" voice-coil LF transducer
- 90° x 70° modified constant directivity horn with 1" compression driver
- Dual-function design: built-in passive crossover or external bi-amp
- Trapezoidal enclosure for array configurations
- HF driver dynamic protection
- 19mm birch plywood construction
- Twelve suspension points (M10) and standard eyebolt hardware
- Integrated hand-carry locations
- Exclusive Mackie Industrial one-time, NO FAULT repair policy
- Five year limited warranty

- Cluster Configurations
- Live Music Reinforcement
- High-Level AV Playback
- Large Speech Systems

Specifications

System	
Freq. Range (-10dB):	60Hz-20kHz
Freq. Response (-3dB):	100Hz-18kHz
Horz. Coverage Angle (-	
	2kHz to 10kHz
Vert. Coverage Angle (-	6dB): 70° averaged
	2kHz to 10kHz
Directivity Factor; Q (DI)	9.5 (9.8) averaged
	2kHz to 10kHz
System Sensitivity ¹ :	99dB, 1W @ 1m
Rated Maximum SPL:	129dB, @ 1m
System Nominal Imped	
System Input Power Rat	
Recommended Amplifie	er ³ : 450W
HF Protection:	Dynamic
Crossover:	2kHz, 12dB/octave
Tueneducene	
Transducers	4.211 (200)
Low-Frequency:	12" (300mm) woofer with 3" (76mm) coil
Nominal Impedance:	8Ω
Input Power Rating:	250W AES; 1000W Peak
Sensitivity1:	99dB, 1W @ 1m
High-Frequency:	1" (25mm) throat, 1.75" (44mm) coil diaphragm assembly
Nominal Impedance:	
Input Power Rating:	35W AES; 140W Peak
Sensitivity ¹ :	107dB, 1W @ 1m
Juliantify :	10/105, 111 @ 1
Physical	
Enclosure:	Trapezoidal, 15° side angles, 19mm multilayered birch
Rigging Inserts:	12 points; accepts M10
	threaded hardware,
	3 eyebolts provided
Color:	Black, scratch resistant paint
Grille:	Custom perforated steel grille with open-cell poly fiber backing
Input Connectors:	Speakon® NL4
Dimensions (HxWxD):	25" x 15.12" x 15.35"
	(637mm x 384mm x 390mm)
Net Weight:	61.6lb. (28kg)
Options

 $^{^{\}scriptscriptstyle 1}$ Measured on axis in the far field with 1 watt (2.83V RMS, 8 Ω) input and referenced to 1 meter distance using the inverse square law. Listed sound pressure represents an average from 300Hz to 3kHz.

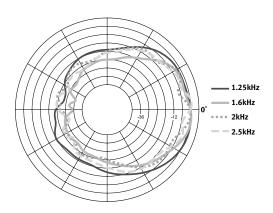

RMS using 20Hz to 20kHz, PN Spectrum, Peak for 2 hours with +6 dB crest factor.

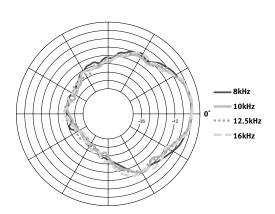

Recommended Amplifier is a power capability value that should be taken as a guide.

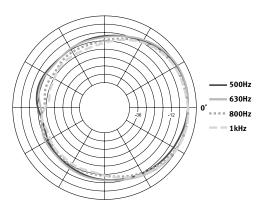

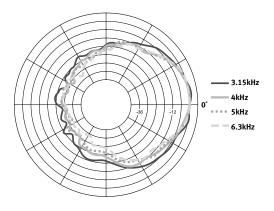

PA121 Vertical Polars

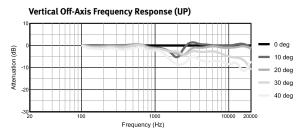

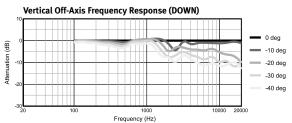

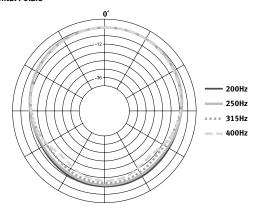

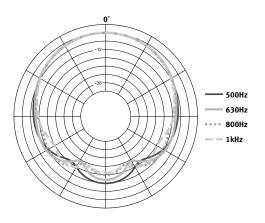

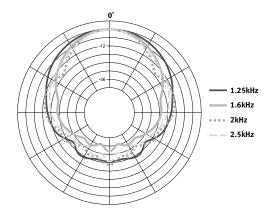

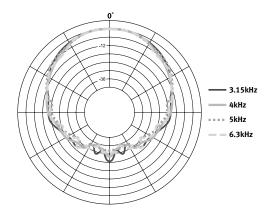

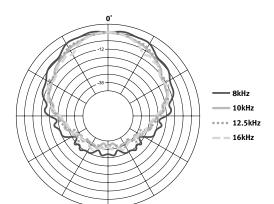

PA121 Horizontal Polars

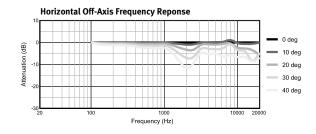

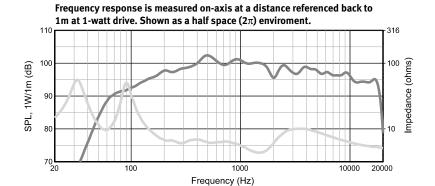

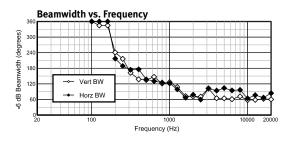

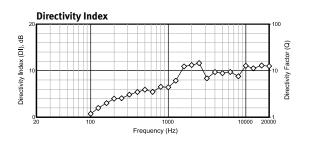

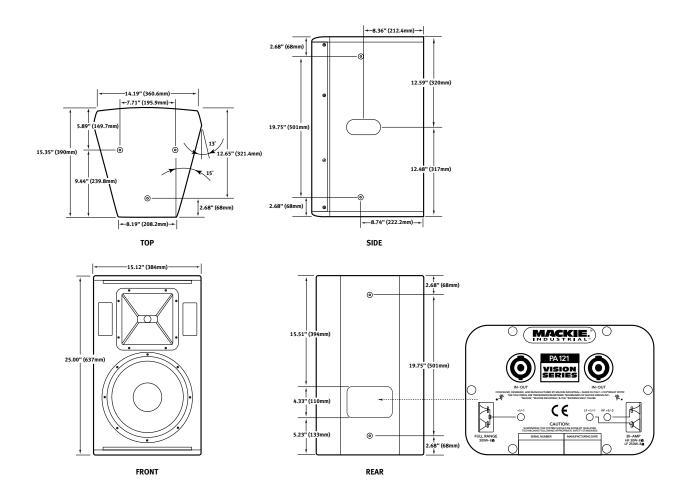

Architects' and Engineers' Specifications

The two-way loudspeaker system shall be self-contained and consist of the following components: (1) a 12-inch, low-frequency driver; (2) a high-frequency section consisting of a constant directivity horn and compression driver; (3) a two-way crossover network; (4) a vented enclosure.

The low-frequency transducer shall be a cone type loud-speaker having a cone diameter of at least 12 inches (300mm). It shall have a voice coil of at least 3 inches (76mm) in diameter. It shall present a load impedance of 8Ω . Sensitivity shall be at least 99dB when measured at 1m with an input of 1 Watt and have a power rating of at least 250 Watts (AES), 1000 Watts peak.

The high-frequency section shall have a compression driver with a diaphragm of at least 1.75 inches (44mm) in diameter. It shall present a constant impedance load of 8Ω . It shall be connected to a constant directivity horn having a throat diameter of at least 1 inch (25mm) and a nominal coverage pattern of 90° horizontal by 70° vertical. Sensitivity shall be at least 107dB when measured at 1m with an input of 1 Watt and the power rating shall be at least 35 Watts (AES), 140 Watts peak.

The system shall be crossed over by an internal, highlevel, passive network having a response of 12dB/octave. The nominal crossover frequency shall be 2kHz. The low-pass section of the network shall have minimum inductance in series with the low frequency driver. The high-pass section of the network shall be equalized to optimize the performance of the constant directivity horn. A dynamic high-frequency protection circuit based on a low-value, low-mass filament resistor shall limit the current available to the compression driver. A connection option shall be provided to disconnect the crossover network, but not the high-frequency protection circuit, from the drivers to allow bi-amp operation. Connections to the loudspeaker shall be Speakon® NL4 connectors

The enclosure shall be a vented design with an internal volume of at least 1.94 cu. ft. and a vent tuning of 60Hz. It shall be constructed using 0.75 inch (19mm), void-free birch plywood and finished with black, scratch-resistant paint. It shall be trapezoidal shaped with 15° angled sides. A full size, detachable, perforated steel grille, finished in black scratch-resistant paint shall be provided. At least 12 reinforced threaded metal sockets (M10) for attaching mounting

(continued Architects' & Engineers' Specs)

hardware, three eye bolts and two hand-carry locations shall also be provided. The overall dimensions of the enclosure shall not exceed $25 \times 15.12 \times 15.35$ inches (637mm x 384mm x 390mm).

The performance of the two-way loudspeaker system shall be as follows: long-term power handling, at least 300 Watts RMS; peak power handling, at least 1200 Watts; frequency response, 100Hz–18kHz at –3dB; maximum SPL, 129dB (anechoic–1m); sensitivity, 99dB SPL (1W/1m anechoic); –6dB coverage, measured average 2kHz–16kHz, 90° horizontal by 70° vertical. The two-way loudspeaker system shall be a model PA121 manufactured by Mackie Industrial.

Mackie Designs continually engages in research related to product improvement. New material, production methods, and design refinements are introduced into existing products without notice as a routine expression of that philosophy. For this reason, any current Mackie Industrial product may differ in some respect from its published description, but will always equal or exceed the original design specifications unless otherwise stated. © 1999-2001 Mackie Designs Inc.
