

BEHRINGER®

Behringer Ball Valve Automation and Feedback Solutions

Behringer's pneumatic and electric actuator packages offer a convenient, cost effective and timely solution to your ball valve actuation needs. Standard kits include the actuator, mounting kits, drilling and testing. Simply add the valve price and actuation kit price for a complete package. Standard delivery is 1-2 weeks with rush service available. NAMUR mount solenoid valves, limit switches and other actuation accessories are also available.

Behringer's ball valves are designed in a way, that all accessories like limit switches, proximity switches and locking devices, can be retrofitted without any mechanical reworking of the housing such as drilling or welding. This can be done even inline under pressure.

Limit and proximity switch brackets can be supplied to offer switching when the valve is open, closed or in both positions. The limit switches can be wired normally open or normally closed.

Special designs which offer a locking function, in addition to limit or proximity switches, are available
