

Moniteur Devices has developed a unique indicator designed to display the position of T-and L-ported ball valves. The indicator will accurately show all of the flow patterns possible with this valve type. Unique features:

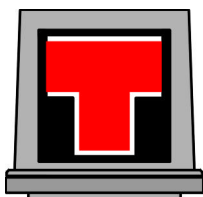

- Indication can start in any valve position
- Display is accurate at each 90° position through all 360° of indication
- Valve flow changes every 90°
- High visibility with top and side views
- 120° version available for "PIG" valves (indication changes every 120°)

The indicator can be supplied with the Sentinel, Watchman, Survivor, and Indicateur series, and includes all of the features of the standard indicator that has made it the preferred choice of users.

Top View

Side View

Position 1
(0°)

Position 2
(90°)

Position 3
(180°)

Position 4
(270°)

Indicator can be started in any of the positions above and rotated to the other three positions during valve actuation.

120° Valves

Indicator for 120° valves and "PIG" valves is also available, visually representing valve flow.

Ordering Information

PM1B - 1120

The indicator type is specified with the third digit of the part number

Indicator

180° - T-port
120° - PIG valves
180° - L-port
