

StarLift

Experience StarLift virtually anywhere with just the push of a button

StarLift

Stewart has expanded the StarGlas line to include StarLift, a special motorized lift allowing StarGlas to remain hidden when not in use. With StarGlas, ambient light is not an issue so it can be placed virtually anywhere and still deliver a fantastic image. With a push of a button, the screen can arise from a hidden location.

StarLift is a convenient and efficient way to house this large piece of glass, allowing an installer to place a StarGlas screen in a variety of locations. The StarLift mechanism can be integrated into a piece of furniture, allowing the screen to be hidden from view until needed. The StarLift from Stewart Filmscreen is a revolutionary rear screen projection solution consisting of three parts— one piece of StarGlas (the largest black screen in the world), a durable aluminum frame, and a motorized mechanism to raise and lower the projection screen surface.

The StarLift offers systems integrators a futuristic alternative to flat panel TVs with production sizes ranging from 42" to 72" (diagonally). While flat panel TVs are extremely popular they are limited by size and visual performance. With StarLift, installers can create unforgettable and WOW-type installations for their customers.

Rise Beyond the Limit of Flat Panel Displays with the StarLift!

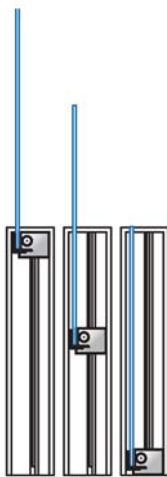

FEATURES:

- Manufactured with Stewart's revolutionary StarGlas 60 or StarGlas 100
- Standard anti-reflective (AR) coating
- Qualities as safety glass
- Ambient light resistant
- Lightweight structural aluminum welded construction
