

Company Overview

Pipeline Inspection Equipment

Specializing in underground infrastructure and environmental inspection, EnviroSight is your single source for manhole cameras, pipe zooming cameras, robotic video crawlers, push cameras and inspection vehicles, plus value-added accessories such as software and video recording equipment. Our tools answer a host of challenging applications, including the inspection of sewer, water and stormwater lines, as well as manholes, wet wells and electrical conduit. And because we're committed exclusively to the environmental industry, you can count on knowledgeable consultation and specialized solutions for just about any inspection need.

Above from top: With 216:1 zoom and a 300' range, **QuickView** inspects manholes, mainlines, large vessels and other confined spaces. Steerable, modular **ROVER** video crawlers inspect 4-60" dia. lines. The rugged, self-leveling **VeriSight** with tri-frequency **SONDE** stores 45 hours of MPEG video.

Accessories (from left): WinCan documentation and reporting software lets you archive and analyze inspection data, images and digital video clips. A **SONDE** locator pinpoints your **ROVER** or **PushCamera** equipment within buried lines. A digital video walkman makes it possible capture and email full length video, as well as still images and clips that can be shared easily by email.

Company Overview

Inspection Images (above from left): PushCamera travels down a lateral line to peer across a septic tank. QuickView, with powerful zoom and illumination, looks down mainlines. Steerable ROVVER crawlers maneuver past offsets, inverts and debris.

Pipeline Inspection Services

Envirosight field technicians use sophisticated equipment to perform I/I studies, troubleshooting, routine inspection and maintenance of underground infrastructure, and locating and zooming. Our detailed field reports contain still images and video footage, all captured using state-of-the-art software and digital media, and all annotated in detail. These reports typically include an assessment of structural integrity; identification of defects and maintenance issues; updates to infrastructure maps; and a wealth of still image and video footage.

Sewer Zooming

Using high-resolution zoom cameras like the QuickView (top) and Ca-Zoom (above), EnviroSight cost-effectively captures the visual data you need to turn GIS maps into a navigational front-end for comprehensive data on sewer condition and maintenance.

Field Resources (above): Trained, experienced EnviroSight inspection technicians rely on sophisticated equipment and vehicles to complete inspection work.
