

# NEW Cherrington Beach Screener Models 4500 & 4500XL

*Expectations are higher. Budgets are tighter.*

Competition for guests & beach patrons is tougher.

What is the best solution?

**One pass Beach Screening!**

*Let your Beach Patrons experience a "Screened – Clean" Beach!*

**Screen Clean your Beach!** With beach screening you can't miss - leave nothing larger than the chosen screen hole size behind.

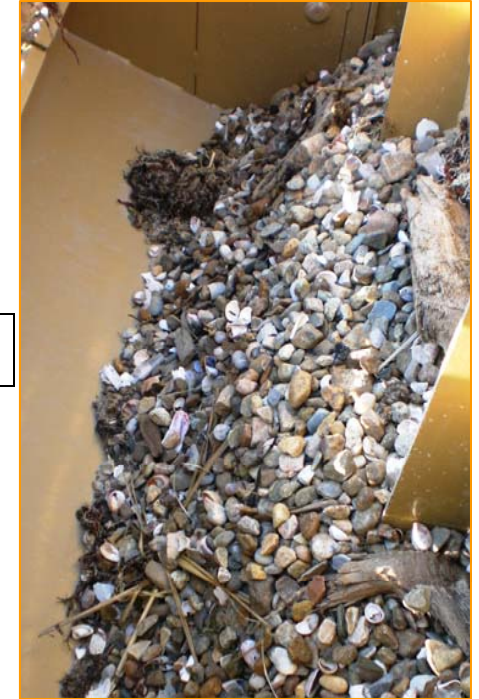

Cherringtons uses a low maintenance one piece, non-rotating, but intensely oscillating sifting screen to remove:

Seaweed, Trash, Cigarette filters, Bottles, Tree Litter, Stones, Coral, & everything else on the first pass.

**When you screen 2" to 6" deep, you have a clean – aerated- sanitized beach like never before!**

Compact size with 'the power delivered to the screen', design.  
 The new 4500XL is Fast, Rugged, Dependable and with only 3 bearings, for amazingly low maintenance & long life.  
No revolving belts, tines or screens!

Cherrington uses a new advanced engineered hydraulic system to power a sifting screen so intensely that it makes for fast routine cleaning and deep down Beach Sanitizing. Carbide glide pucks for long life, and a smooth, quiet, operation.

I can't believe all of that was in my beach!

With a NEW Cherrington Beach-Screener, a Cleaner & Safer Beach is possible quicker and with a lower operating cost of any Beachcleaner. Cherrington Beachcleaners lift, sift and screen - cleaning method reduces bacteria and e-coli.  
**Your Cleaner Beach WILL be noticed.**
