### DEFENDER (no fire equipment) / FIREHAWK 18 - 20

**Product Highlights and Innovations:**

Patented - Dual 7' collapsible dive platform doors. These doors are manually controlled. (foam filled) float on the waterline when completely lowered providing multiple patient a rescue situation. These doors also provide a flat waterline platform for dive exercises and area for easier helicopter attachment and removal. When both Port and Starboard doors are lowered these also provide additional boat stability in heavy seas.

**Model**

The Outboard Firehawk (Fire model) also provides a 1200 GPM fire pump and bow mount fire suppression (water and foam) and "pump out" capabilities. The below deck fire pump plumbed through the keel (Patented). The pump is always primed and can supply water key for the fire pump engine.

The Twin Jet Drive Firehawk allows water to be diverted from one of the jet drives to provide GPM. This system avoids the cost of the separate Hale pump and engine.

2/3's of the hull is foam filled. Making the boat "unsinkable". The deck is also self bailing transom and side dive door design allowing water to escape from the deck quickly.

This unit's hull design creates a minimal wake designed for high speed pursuit in "no wake" well as rescue situations in heavy seas.

**Specification**

Length	18' -20'
Beam	95"
Overall Height on trailer with canopy	11'
Draft w/ Jet Drives	16"
Draft w Outboard/s or Stern Drive	21"
Dry Weight	4,500lbs.
Load Capacity	4,000 lbs.
Towing Capacity	5,000 lbs.
Fuel Capacity	70 Gallons
