DEFENDER (no fire equipment) / FIREHAWK 35-37

Product Highlights and Innovations:

Patented - Dual 8' collapsible dive platform doors. These doors are hydraulically controlled from the drivers helm with a manual override. The doors (foam filled) float on the waterline when completely lowered providing multiple patient access in a rescue situation. These doors also provide a flat waterline platform for dive exercises and rescue basket area for easier helicopter attachment and removal.

When both Port and Starboard doors are lowered these also provide additional boat stability in heavy seas.

Model

The Firehawk (Fire model) also provides up to 3000 GPM fire pump and Twin bow monitors for fire suppression (water and foam) and "pump out" capabilities. The below deck fire pump is directly plumbed through the keel (Patented). The pump is always primed and can supply water with a turn of a key for the fire pump engine.

2/3's of the hull is foam filled. Making the boat "unsinkable". The deck is also self bailing with the open transom design and with the side dive door opening acting as 8' deck drains allowing any water to escape from the deck.

The Enclosed Pilot House design also allows for added protection and heat and AC in foul weather and extreme sea conditions.

Video

LOA	35-37'
Beam	10'
Weight	14,000lbs
Draft w/ Jet / Stern Drives	27" / 31"
Dead Rise	24°
Towing Capacity	10,000 lbs.
Fuel Capacity	200 gallons
Person Capacity	18
Boat Height (from waterline)	11'
