

Self-Elevating Spring Tables

Self-Elevating Tables are designed to automatically raise or lower as materials are removed or added to the platform, keeping material at an ergonomic work height. These tables increase productivity while reducing potentially harmful bending and twisting motions. The counter balance springs can easily be added or removed to adjust weight-to-height sensitivity. This feature allows the user to conveniently set the table to fit each application. The ETS-230/460 has polyurethane casters while the ETS-840/1120 rolls smoothly on mold-on-rubber casters.
