

BREAK RITE™ CABINETS

BREAK RITE™ CABINETS

Potter-Roemer has taken a leadership position, by eliminating the hazards associated with the old, industry standard of single or double strength plate glass. By incorporating our patented Break Rite™ handle, we've eliminated flying shards of glass, while providing a quick, easy and safe method of breaking the glass to gain access to the cabinet contents.

Potter-Roemer will no longer provide single or double strength plate glass, in any of our cabinets.

As typically specified, plate glass requires a hammer, breaker-bar, shoe or other available means to break the glass. Unfortunately, during an emergency, the break device may be missing, or more alarming, if available, will shatter the glass into large, razor-sharp shards, increasing the hazard.

Potter-Roemer has the solution! The tempered safety glass is harmlessly pelletized by simply pulling the patented Break Rite™ handle. The small glass pellets drop safely to the ground. The door can then be safely opened to allow easy access. Tempered safety glass as exclusively provided by Potter-Roemer is in compliance with ANSI Z97.1-1984 unlimited and 16 CFR CPSC 1201, Category II Glazing.

SPECIFICATION

Fire extinguisher, hose, valve, or combination cabinet shall be Model No. _____ as manufactured by Potter-Roemer, Cerritos, CA, 800-366-FIRE.
