

## Everybody needs to do laundry, but nobody wants to make a day of it.

ADC coin-op machines dry quickly, consistently and precisely. That means laundry customers can get in and get out and get on with their lives. And, coin-op facility owners can maximize their revenues.

Faster drying times mean more cycles per day and that translates into greater earning potential. For laundry customers, shorter dry cycles mean they can read a chapter instead of a novel, while they wait for their socks to finish tumbling.

Choose from energy-efficient, high performance single-pocket and stacked models. Each is designed to keep service costs down and revenue potential up.
