Current Output Units

- 2-wire, 4-20 mA current output device delivers rated current into any external load of 0-800 ohms
- The 4-20 mA current output units are designed to have current flow in one direction only - **please observe polarity**
- The electrical cable shield should be connected to the system's loop circuit ground to improve electrical noise rejection

Voltage Output Units

3-wire circuit. If supplied with 2 feet of cable, the electrical connection is as follows:
