

Reimers[®]

ELECTRA STEAM

Reimers has just released a new design of our reliable JR Boiler. It is the result of field input and consultations with a number of our distributors and customers. Some key features are:

- Accessible Gauge Glass
- Electronics package accessibility
- Flexible Steam Nozzle positioning
- Solenoid Valve easy replacement

Of course the boiler is designed & constructed to Section I, Parts PMB & PEB of the A.S.M.E. Boiler Code, as well as, CSD-1. It is listed under cULus and each unit is inspected & certified by a commissioned National Board Inspector.

We have manufactured electric steam boilers and associated products since 1908. Our goal is to continually improve the quality and safety of the boiler.
