

## **ARDEX LT-65 Lite-Tech Lightweight Fill**

A lightweight, Portland cement-based, high-strength, fast-setting, non-shrinking, pre-leveling system for concrete. Reduce the dead load without sacrificing product performance!

### **Product Capabilities:**

For use over concrete substrates as a lightweight fill to receive a smoothing layer of ARDEX K 15 or ARDEX SD-T.

Installs from 3/4" to virtually any thickness in a single operation.

Designed specifically for deep-fill, lightweight applications where design constraints limit the amount of dead load that can be added to the structure.

Accepts light foot traffic in 2-3 hours, and will not shrink, crack or spall - even when applied in thick layers. The final smoothing coat can be installed just 16 hours later.

Can be smoothed with ARDEX K 15 Self-Leveling Underlayment Concrete to prepare for the installation of finished flooring, or with a sealed coat of ARDEX SD-T Self-Drying, Self-Leveling Concrete Topping for a concrete wear surface.

### **Benefits:**

- Installs from 3/4" to any thickness
- Fast-track system
- Install the final smoothing coat just 16 hours, walkable in just 2-3 hours
- No troweling required
- Not a gypsum product
