

# For the Coolest Bodies on the Road.

Kemlite

## Reeper Roof®

Reeper Roof is an opaque, high-strength fiberglass panel used as the exterior roof skin on refrigerated trailers and truck bodies.

**REEPER ROOF IS MORE ENERGY EFFICIENT THAN ALUMINUM**

## Provides Better Thermal Efficiencies Than Aluminum when Exposed To Solar Radiation

- Reeper Roof's white, glossy finish reflects up to two times the solar radiation and is almost 1,000 times less heat conductive than aluminum roof panels.
- The 0.075" panel has a light transmission of under 1% and the light transmission of the 0.06" panel is under 3%.
- The panel is made up of thermoset polyester resin reinforced with chopped fiberglass strands.
- Contains UV inhibitors and LumaShield™ surface film for easier cleaning and additional UV protection.
- Extra glass (woven mat) is added to the roadside and curbside panel edges for added strength at the fasteners.
