

## **ARDEX SD-P**

Trowelable patch for smoothing and repairing floors. Developed to reduce curing time on pressed-for-time jobs.

### **Product Capabilities:**

For smoothing and repairing of concrete floors, ramps, stairways, as well as non-porous substrates such as terrazzo, ceramic & quarry tile prior to the installation of floor covering. When installing over standard absorbent concrete, no priming is required.

ARDEX SD-P sets quickly so that a smooth, steel-troweled surface can be obtained readily. The finished surface hardens rapidly permitting the installation of most common floor coverings to proceed immediately - no additional drying time is required. Using advanced Portland cement chemistry with a self-drying matrix, ARDEX SD-P is ideal for patching and reaches a compressive strength of 4,200 psi.

### **Benefits:**

- Portland cement-based
- Provides a smooth surface prior to floor covering installation
- Mixes with water only - no primer required over concrete, no latex additive necessary
- Easy to mix and apply
- Exceptional bond strength
- Use for interior floors only
