

The Turlington™ Collection

**Bruce**  
hardwood floors

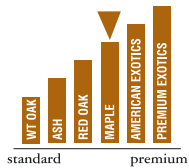

# Selecting the right Turlington™ floor for your home

The variety of species and colors available in the Turlington Collection offers you design options to suit your decorating style. The combination of Bruce's innovations in finish technology and hardwood's natural durability promises flooring that is beautiful, durable and easy to care for.

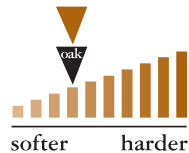

## Engineered Hardwood

Turlington hardwoods feature 100% genuine hardwood assembled in multiple layers, permanently bonded together for superior strength and stability anywhere in your home – including your basement.

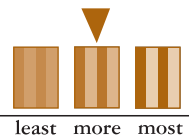

## Species

From traditional oak to domestic exotic hardwoods, the Turlington Collection features a variety of species to suit your style and decorating budget.

## Hardness

The density and hardness of a wood species may impact its performance. When extra durability is important, consider Oak, the industry's standard, or a harder species, based on our scale.

## Color Variation

Wood is a natural material that features changes in color and tone. For the look of contrasting light and dark tones, select a species that offers the most variation. For a consistent look, choose a species with less variation.

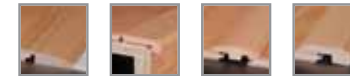

## Edge Detailing

Turlington floors feature micro-beveled edges and ends to subtly define the look of individual planks.

## Trims and Moldings

The Turlington Collection offers a complete selection of coordinated trims and moldings in all species and colors for the perfect finishing touch.

## Care and Maintenance

To preserve the beauty of your Turlington floor, sweep or dry mop as needed. Periodically clean with Bruce® Dura-Luster® Floor cleaner, and be sure to clean spills immediately.

## Lock&Fold™ and NextGen™ Technologies

Turlington floors marked by this symbol feature Lock&Fold installation with patented NextGen engineered technology for easy installation and improved stability.
