Easy and intuitive viewing

The graphic user interface (GUI) is more attractive and informative than ever before. Thanks to the new WVGA high-resolution display, the skins, icons and keys appear clearer, sharper and more 3-dimensional. Screen layout is very intuitive, with seldom-used keys easily hidden away, allowing the user to operate the unit in a quick and safe manner.

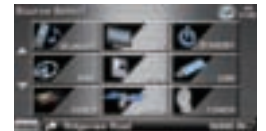

eXcelon DVD entertainment systems allow the user to choose from three unique skin designs (3D, Fire and Metal). These skins can easily be changed at will for a fresh look.

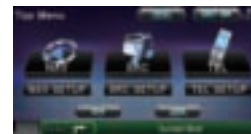

3D (Default skin)

Fire

Metal

Just talk, and you're in control

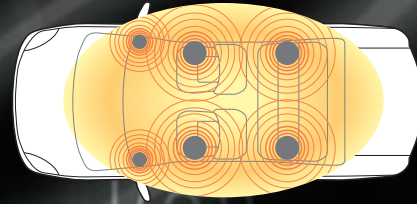

The new DNX9140 DVD Entertainment system with built-in advanced navigation by Garmin enables hands-free operation of navigation and audio/video functions – all you need to do is talk to the unit all the while keeping your concentration on the road for enhanced safety. Controls include source selection, basic operation of connected audio and video devices, volume adjustment, navigation functions, monitoring of rear view camera, content selection from sources such as iPod, iPhone, DVD, flash-drive, Sirius/XM satellite radio channel search, and much more*.

* The screen must be displaying specific content to ensure proper control.

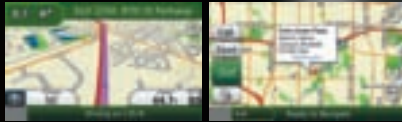

Home theater goes mobile

Take along all the excitement of home theater wherever you go with the eXcelon DNX9140 and DDX814 in-dash DVD entertainment systems. Both models feature theater-grade 5.1 surround sound processing for full movie-house entertainment, putting you right in the middle of your favorite videos.

Find destinations quickly, get there faster guidance by GARMIN

If you wish to find your destinations quickly and safely, you need a very fast route guidance and screen refresh rate. The DNX9140 features a high-speed navigation system by industry-leader Garmin that contains an enhanced search function and a more intuitive user interface to help swiftly guide you to your destination.

Hands free means better concentration Bluetooth

Hands-free operation of your Kenwood entertainment systems allows you to keep your hands on the steering wheel allowing you better concentration on your driving. Advanced Bluetooth technology provides wireless connection and operation of bluetooth enabled devices such as mobile phones and even phones that can stream music via A2DP.

Connect to the Newest Technologies without Removing your Existing Radio

Seamless Integration

Kenwood has a wonderful solution for anyone wishing for the latest in audio, video or navigation performance while keeping a vehicle's existing radio. Kenwood's CarPortal™ solutions provide seamless integration of iPod, satellite radio, HD Radio, mobile phone via Bluetooth, DVD video and navigation while maintaining the original equipment in the dashboard.

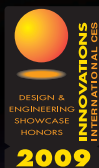

• Audio Solution

A Better Audio System is within your reach

Adding a brand new iPod, advanced Bluetooth hands-free mobile phone operation or Satellite Radio to your existing audio system has never been easier. Kenwood's new KOS-A300 CarPortal™ radio upgrade solution provides seamless integration of these devices and more, using a compact multi-line text LCD display to show up to five-lines of information. A unique multi-control wheel gives you iPod-like music and source selection capability, and variable color illumination allows you to customize the look of the control wheel to match dashboard lighting.

• Multimedia Solution

Integrate both audio and video

Take your entertainment system to the highest level. The KOS-V1000 and KOS-V500 will allow you to add the latest in DVD Video to your audio or video system, and even display everything on your existing factory-installed video screen (accessories are required). Want the best navigation system? Need hands-free control of your mobile phone? Are you missing satellite radio? All of these and more can be added seamlessly with full touchscreen control over everything. If you can dream it, you can do it.
