

ActiveLinx™ VGA/RGBHV Plates

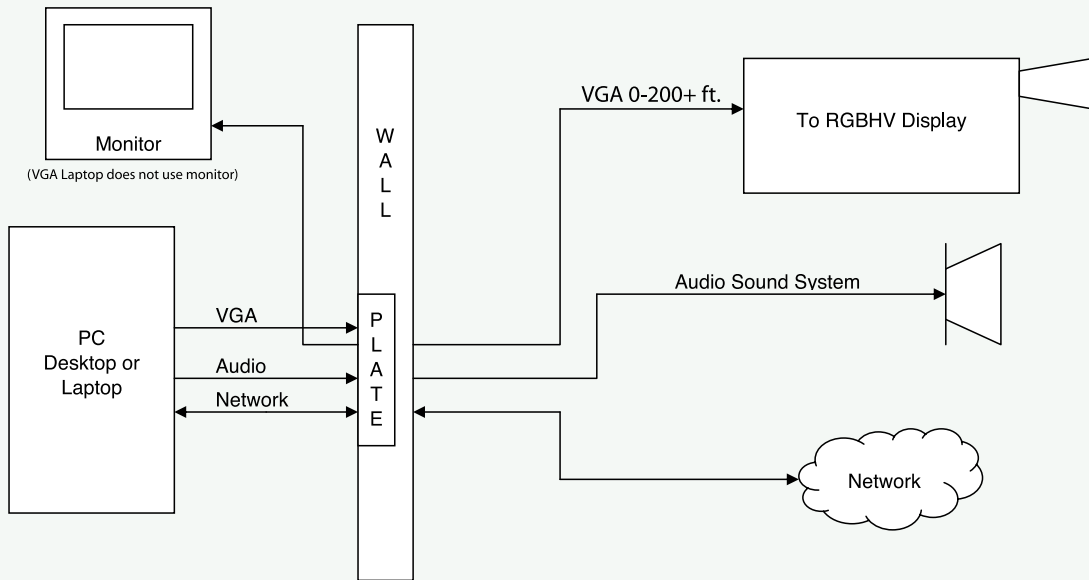

VGA Desktop

Designed for use in larger systems or those with a desktop computer. The sync is processed for a more stable image with digital displays (LCD, DLP, and plasma). In addition, there is a buffered monitor output. The unbalanced audio from your computer is balanced and amplified, protecting against noise. The device is environmentally protected against moisture. There are 4 gain and EQ settings for distances in excess of 200'. Sync processing may be disabled.

VGA Laptop

Designed specifically for use in smaller installations where the main sources are laptops, this device amplifies the video and sync signals for a more stable image at the display. The unbalanced audio from your computer is balanced and amplified to protect against noise. The device is environmentally protected against moisture. There are 4 gain and EQ settings for distances in excess of 200'.
