

## High Performance Computer Headsets

In speech recognition software, transmission of the voice must be accomplished at very high standards. The key element is the microphone. VXI TalkPro incorporates a peerless, voice band optimized, noise canceling electret specifically designed for speech applications.

### All TalkPro headsets include:

- High performance, noise canceling microphone to block background noise.
- Flexible “gooseneck” boom that stays in position for consistent voice input.
- Concave ear cushion for exceptional comfort and improved sound.

### TalkPro USB100

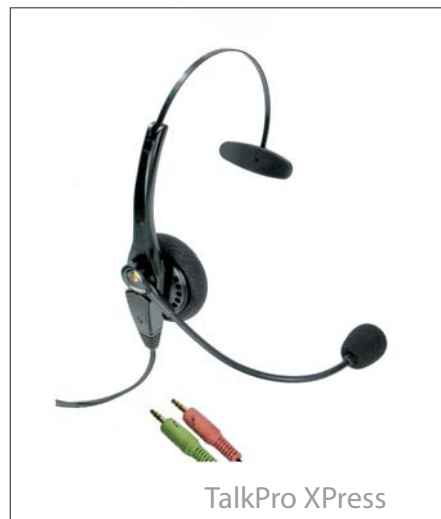

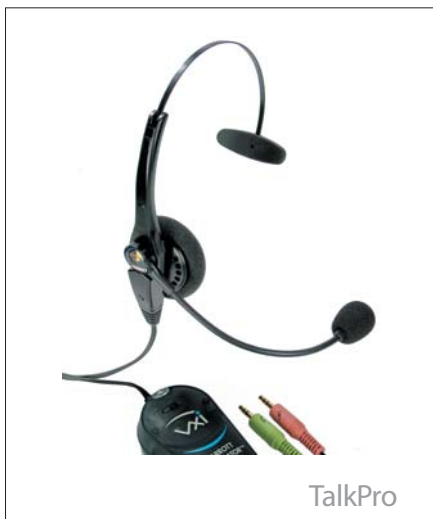

- Digital signal processing (DSP) heightens audio performance and removes the problem of voice echo sometimes associated with VoIP applications.
- Inline disconnect allows you to leave the workstation without having to remove your headset. The pendant features both microphone mute and volume control.
- Compatible with Windows XP, 2000, Me, 98SE and Macintosh OS 9.1 and higher.

### TalkPro Max

- The Translator feature provides an easy access PC speaker jack for simultaneous headset/PC speaker connection, guaranteed compatibility with older sound cards (before year 2000) and voice frequency shaping.
- Inline disconnect allows you to leave the workstation without having to remove your headset. The pendant features microphone mute and volume control.

### TalkPro / TalkPro XPress

- TalkPro: The Translator feature provides an easy access PC speaker jack for simultaneous headset/PC speaker connection, guaranteed compatibility with older sound cards (year 2000 or earlier) and voice frequency shaping.
- TalkPro XPress (without Translator): Recommended for sound cards manufactured after the year 2000.
