

Motorized Art System Featuring A Robotic Arm

View artwork and frame selections at www.vutec.com

Introducing ArtScreen R-Series, a high-tech motorized flat screen masking system that transforms a Plasma or LCD Television into a work of art. Utilizing multiple viewing angle technology, ArtScreen R-Series utilizes a remote controlled robotic arm for adjusting the viewing angle of flat panel displays thus eliminating undesirable glare and reflection. Tilt up/down and swivel range provides maximum mounting location flexibility while maintaining optimum viewing angle.

The result is an automated retractable work of art that provides a creative yet technologically advanced masking system for Plasma and LCD televisions and video projection screens.

FEATURES

- Universal remote to control RoboMount and other audio and video components
- Two preset controls for favorite positions
- Interface with RS-232 port
- Easy installation – installing RoboMount on the wall is no different than installing manual wall mounts
- Cable management – provisions are provided within the bellow to conceal cable and wire
- Safety – bellow also protects against foreign objects interfering with the movement of the actuators
- Selector – switch on the control panel to select amongst different TV width sizes
- LED display on the control box to indicate the size of the TV selected, status information and error messages
- Control box is removable from the base of RoboMount for easy access of the control box
- Load Capacity: up to 180 lbs. and 61" of outside width

DIAGONAL SIZES

42", 50", 60", 65"
