

## Major innovations in fire fighting technology

When there is no such thing as a risk free world, whatever happens you can count on us.

- High performance and environmentally responsible foam agents
- Fire pumps
- Foam pumpers
- Fixed foam systems
- Foam delivery devices
- Flammable liquid fire training
- Super high capacity water hose delivery systems
- Foam pumpers and systems servicing
- Technical assistance

# Big Flow Specialized Pumping Solutions

**NEPTUNE**  
PUMPING SYSTEM

The Neptune Pumping System is an innovative, integrated, transportable pumping module capable of pumping water at 5,000 gpm at 150 psi. Neptune integrates two floating satellite pumps that supply water to a main pump from distances up to 150'. The satellite pumps provide up to 50' of vertical lift inclusive of 150' total distance. This feature allows greater access to more water sources when compared to standard suction lift pumps which are typically limited to 20' horizontal and 10' vertical.

**TRITON**  
PUMPING SYSTEM

Triton, the newest member of Kidde Fire Fighting's "Big Flow" family of high capacity pumps, hose, hose deployment, and water/foam solution delivery devices, is a mobile, floating pump system that feeds high capacity (5,000 gpm) water to large primary pumps at positive pressure. Triton eliminates the need to pump from draft and dramatically increases the area in which primary pumps can be deployed and operated.
