

WIRELESS HOSPITALITY PACKAGE

To Be or Not To Be Occupied, that is No Longer the Question...

Titus presents the **Wireless Solution** to solve the problem of occupied space control for fan coils in hotel rooms and suites. The new thermostat is wired to the fan coil unit and communicates wirelessly with the key card sensor to determine if the room is occupied. Once the keycard is inserted into the wireless sensor, the thermostat receives a signal to change the fan coil to an occupied state, thereby quickly returning the space to the desired temperature for the guest.

- ✦ No wires means low installation costs.
- ✦ No batteries required reducing cost and waste.
- ✦ Equipment occupancy control means more energy efficient operation.

Titus
The Leader in Air Management

Titus, The Leader in Air Management has an HVAC solution for any application. Whether it is a ceiling installation or an underfloor application, Titus has the products to meet your needs. Contact your local Titus Representative for more information.
