Air Gap Drains for RP-40 & RP4A Series

The AGD4A Air Gap Drains are manufactured in the USA of lightweight ABS plastic. The versatile ABS plastic allows drainage piping to be attached to the internal NPT threads or to the outside with a coupling and the appropriate cement or using a flexible pipe coupling.

The Apollo Air Gap Drain (AGD) is designed to funnel minor relief valve discharges, due to line pressure fluctuations and /or minor check valve fouling, into the drainage system. Drain piping is easily attached to the drain's threaded bottom.

For installation with Conbraco's RP-40, RPDA-40, RP-4A, RPDA-4A, RP-4An, and RPDA-4An Series Reduced Pressure Principle backflow preventers.

Note: The AGD is NOT designed to collect the full discharge capacity of the relief valve.
