

# Insert Fittings

Mueller offers a variety of insert fittings in four different materials; PVC, Nylon, Polypropylene and Steel. These insert fittings are designed to be used in conjunction with clamps and compression fittings for the connection of flexible polyethylene plastic tubing and hosing. Just as with polyethylene tubing, these fittings are for cold water applications only. Polyethylene plastic tubing comes in long coils, requires support every 32 inches and is often subject to kinking if bent too far. Utilizing reliable Mueller Insert Fittings helps to ease the installation of flexible tubing or hosing systems. When the job requires a variety of insert fittings for polyethylene tubing, think Mueller!
