## SMART SCANNER

### SMART SCANNER

The **Smart Scanner™** is designed to function as a drop-in replacement for the barcode wands that are found on most electrofusion processors in service today.

The **Smart Scanner™** provides faster, more reliable barcode scanning than the traditional pen type wands. The rugged molded enclosure and recessed scanning engine will protect the sensitive scanning elements.

The **Smart Scanner™** allows the user to remotely start and stop a fusion. The optional integrated GPS will allow fitting locations to be stored for each fusion performed.
