Control  Suite Systems

"Many big companies and states are increasingly steering their travel business to hotels that meet 'green' environmental standards."

– USA TODAY

The ideal control solution.

Control4® Suite Systems is the ideal automation and energy management solution for the hospitality industry. With an affordable, scalable platform, standards-based wired and wireless technology and broad-based integration, Control4 is a smart, realistic, flexible solution for any property. Suite Systems provides real savings while allowing you to become eco-friendly and provide your guests with a superior, personalized experience.

A wise investment.

Adding a control solution to your property just makes sense. With Control4® Suite Systems, you can easily integrate lighting, shade, HVAC, entertainment and security controls using one platform, while enjoying convenient centralized management. Control4 Suite Systems also enables powerful energy management solutions for you, and your guests, so you can realize significant savings in a short period of time and see actual return on your investment.

And while you're enjoying the bottom line benefits, your guests will be basking in a level of personalized luxury and control that practically reinvents the guestroom experience.

Affordable

Control4 Suite Systems brings you the benefits of a practical, reliable automation system at a price that fits into your budget.

Easy to Install

Control4 Suite Systems delivers both wired and wireless solutions for installation in new construction or retrofits of properties.

Easy to Use

Control4 Suite Systems makes life Everyday Easy™ for you and your guests by offering intuitive solutions that your guests can easily use.

Energy Efficient

Control4 Suite Systems offers an unobtrusive way to conserve money and resources by managing lighting and HVAC systems in unoccupied rooms and giving guests green settings.

Green settings allow guests to "green their stay." When your guests are voluntarily opting in for energy management, you're not only saving the earth, you're saving money.

Redefining the guest experience.

Control4® Suite Systems is the first standards-based, door-to-drapes, automation and entertainment control technology for hotel and resort owners. Your guests will be able to use a single remote to control draperies, lighting, room temperature, room status, television, music, and video systems. With the same remote, your guests can schedule wake-up calls and make requests for services such as valet, house-keeping, room service, spa and more, giving them the unprecedented ability to create an environment perfectly suited for their stay.

Control4 Suite Systems can easily store profiles for each of your guests, so you can automatically set the room to their preferences the next time they check in, ensuring that they enjoy personalized comfort and convenience each and every stay.

Green settings allow guests to voluntarily "green their stay" by selecting their preferences for light level, room temperature and the frequency of linen changes. When your guests are voluntarily opting in for energy management, you're not only saving the earth, you're saving money.

“Why Control4 is the Company to Beat in Home Energy Management (and Why Microsoft, Google, Intel, and Sony are lining up to do the beating)

Control4 has the best answer we've seen so far. The company combines technical specs robust enough for the most demanding utility, an interface easy enough for the most tech-averse consumer, and applications cool enough to make any neighbor jealous.”

– SMARTGRIDNEWS.COM

The positive realities of energy management.

Control4® Suite Systems gives you the power to save energy while actually improving the guest experience. You can automatically set heating or cooling, and turn off lights, entertainment systems, and any other electronic devices in the guest room as soon as the guest checks out. This alone can provide a staggering amount in energy savings. In fact, many hotels can recoup the cost of installing hotel energy automation within two or three years. Plus Control4 Suite Systems can help qualify your hotel for the Leadership in Energy and Environmental Design (LEED) certification.

The wireless nature of the Control4 system also virtually eliminates the need for costly conduit and wiring in traditional construction—saving money in construction costs and helping the environment by consuming fewer construction materials.

CONTROL4 – A SCALABLE SOLUTION

Control4 products are developed to work on standards-based communication protocols. Unlike other companies that use a proprietary platform, the Control4 system adheres to IEEE (Institute of Electrical & Electronics Engineers) standards. Meaning, if you want to add or change features in your system, it's easy.

- Ethernet/IEEE 802.3
- WiFi/IEEE 802.11.b or IEEE 802.11.g
- ZigBee/IEEE 802.15.4

Solutions built for you.

Control4® Suite Systems can provide a complete “door to drapes” automation solution or simple HVAC control. One of the best things about Control4 Suite Systems is that it's modular and scalable. You can start with one feature like energy management, and reap in real energy savings, and then add other features and functions as your budgets allow. Or you could start by featuring Control4 Suite Systems in just your luxury suites and then expand to add control to other guestrooms when you're ready.

This scalable, affordable approach to hotel automation is unique to Control4 Suite Systems. Control4 leverages IEEE standards-based wired and wireless technology, so it's easy for you to add or change control features and to integrate with a broad range of products.

The flexible platform and wireless solutions also make Control4 Suite Systems an ideal solution for new hotel construction or retrofitting an existing hotel, which is especially helpful for properties bound by historical regulations.

Powerful, sleek products.

Suite Controllers

The "brains" of the operation, Suite Controllers provide the behind-the-scenes management over intelligent devices in the room.

Thermostats

Featuring bi-directional communication and seamless integration with the Control4 network, wireless thermostats add an impressive array of climate-control functions that can interact with every other intelligent device in the room and help provide significant energy savings.

Interfaces

Sleek touch screens, intuitive remotes and on-screen navigators, and simple keypads let you give your guests easy-to-use control.

On-Screen - Using the Control4 System Remote Control, your guests will enjoy total intelligent control from the televisions in the room.

Touch Screen - Control4 offers a variety of Touch Screens that give your guests total intelligent control from a convenient interactive screen.

System Remote Control - The System Remote Control SR-250 has a convenient OLED backlit display that provides list navigation and pre-set buttons for simple one-touch commands.

Keypads - Unlock the power of customizable, preset, one-touch control functionality with our elegant Keypads.

Lighting Control

Control4 Dimmers and Switches easily replace existing light switches, or plug into outlets to offer complete control of lights and electronic equipment without construction hassles, so you can reduce utility bills, extend bulb life, conserve natural resources, and provide the convenience of pre-determined, one-touch lighting scenes.

Concierge service.

Control4® Suite Systems Concierge Service takes the personalized guest experience concept a step further, while helping hotels maximize business efficiency and deliver on green initiatives. Concierge Service allows hoteliers to select customizable digital applications that contribute to each guest's unique, personalized experience. Guests can easily book reservations, learn about events and order services from the comfort of their hotel rooms. They can also interact with their own Facebook and Twitter pages on the flat-screen TV in their rooms, making appointments that fit within their 'portal' schedule of events:

Schedule application – offers a personalized calendar of events

Reservation application – allows guests to make reservations for spa treatments, dining reservations with the hotel and via Open Table, golf tee times and other activities offered by the property

Room service application – allows guests to request room service, “turn down service,” towels and room cleaning

The customizable Hotel Application Store provides a platform through which hotels and resorts can select applications to offer their guests during their stay. Hotels also save printing-related costs and resources by eliminating the need for hard copy Compendium Books in each room. With a digital compendium, information, events and room service menus can change instantly and often to accommodate real-time updates and daily specials.

“High-End Hotels Are Going Wireless

Upscale locations are adding high-tech systems that let guests control lights, curtains, alarm clocks and more.”

– LOS ANGELES TIMES

“The Hot Company at HITEC

Control4 was the company most frequently cited as a standout; even newly inducted hospitality technology hall of famer Fraser Hickox points to Control4 as the company that most piqued his interest this year.”

Wireless 2-way remote	•	•	

Broad integration.

By seamlessly interacting with your hotel property management systems and networks, and enabling communication between electronic devices from virtually any vendor, Control4® Suite Systems makes it easy to implement partial or full guest room control.

Marquee / DND / MUR

The Control4 system can be easily configured to react to door chimes, detect food carts that need to be retrieved by catering, and manage do-not-disturb, turn-down, make-up-room and service requests. The marquee is an exterior room door station which shows the room number and incorporates a doorbell feature for the room along with two LED lights showing if the room is in do-not-disturb mode or is waiting for maid service.

Door Lock Systems

Key cards can be easily programmed to trigger guest-room events, like automatically setting the “welcome” temperature, lighting and music the first time a guest enters a room. Maid keys can also be configured to activate certain lighting, temperature and electronics actions in the room. The key cards can also alert hotel staff to the door’s status – open, closed or locked.

Minibar

Through the Control4 navigation, guests are provided with information about the items in the mini bar from the intuitive on-screen interface. Minibars can be programmed into the system to show door activation, provide automated refill requests and more, creating an efficient way for property management to ensure that guests’ needs are always fulfilled with less demand on staff hours.

Drapes & Shades

Using the Control4 Suite Systems navigation, guests and staff can easily open, close or stop drapes and shades. This feature allows properties to maximize energy efficiencies, create welcoming environments for guests, and monitor the motors on the window coverings. Guests will enjoy the ability to personalize their window covering settings automatically to preserve privacy, showcase views, and contribute to energy conservation.

Smart Network Switching

The Lorica Room Center is a managed converged network specifically designed to meet the needs of the hospitality industry. Two-plus years in the making, the LRC is a comprehensive solution that addresses hardware, software, wiring, management, security and support for a truly converged hotel IP network. All this while drastically reducing cabling costs and providing substantial efficiencies in ongoing support.

Audio/Video

One remote controls any audio/visual equipment in the room including stereos, speakers, televisions, DVD players, iPod docks and more. The intuitive on-screen interfaces make it extremely easy for guests to navigate the music they listen to and the shows they watch.

LodgeNet

LodgeNet Interactive Corporation (NASDAQ: LNET) is the leading provider of media and connectivity solutions designed to meet the unique needs of hospitality, healthcare and other guest-based businesses. LodgeNet360™ is an integrated, cost-effective solution delivering digital video, broadband and telephone services with single-source convenience. LodgeNet360™ supports Control4 solutions as its primary technology for in room controls.

Raise the bar in your hotel.

With Control4® Suite Systems you can enhance the guest experience, reduce energy usage and enjoy substantial ROI. The hotels Control4 is working with are already seeing returns on their investment. They love that Control4 lets them save money, impress their guests, and be a leader on Going Green in their industry – all with very little effort.
