

Fire Cable Clip

Typical applications

- To secure 2x 1.5mm 2c FP Cables
- For best installation use in D-Line 30x15mm fast fit trunking or 30x30mm Quadrant trunking.

It is a requirement of BS5839 Part 1 that surface mounted Fire Performance cables must be secured using metallic fixings that can withstand the same temperatures and vibration as the Fire Performance cables.

The D-Line F-Clip has been tested by Bodycote Warrington Fire, confirming it satisfies cable management requirements of BS5839 part 1. The tests confirmed that the F-Clips, when subjected to 830 degrees C (+/-40 degrees C) for 30 minutes at a voltage of 500V rms, enabled the FP cables to maintain circuit integrity.

The F-Clip is manufactured from high temperature steel, with a gold passivated finish to provide protection against mildly corrosive elements. With no sharp edges and easy to fold tabs the F-Clip is simple to use.

Installation time is at least halved as one clip fits 2 FP cables, compared to fixing one P-type clip per FP cable.
