EMERGENCY DRENCH EQUIPMENT

POTTER ROEMER FIRE PRO
*offers many features as standard,
preassembled to ensure products
work the first time, every time:*

- Highly visible yellow, UV protected, high density polyethylene tank with no moving parts.
- Eyewash heads provide a minimum of 0.4 gpm flow rate for 15 minutes and include a yellow eyewash pull strap for ease of activation.
- Pull strap caps form an airtight seal that prevents dust and debris from collecting on the eyewash heads.
- Heavy-duty stainless steel wall bracket for wall mounting make removal and remounting easy.
- Integral handles on the top and sides, wide fill opening with threaded cap, highly visible identification/operation label and inspection maintenance tag.
- One container of concentrated water preservative with each eyewash station to increase the storage life of the water solution for up to six months.

PORTABLE GRAVITY-FED EYEWASH STATION

Model #SOP50

The portable eyewash station is ideal for low-traffic or remote areas where a person's eyes may be exposed to injurious or corrosive materials and there is no immediately available supply of potable water. The eyewash station does not require plumbing and can be wall mounted or may be placed on a counter-top or other suitable flat surface. Locations such as gasoline stations, mechanical repair shops, and janitorial supply areas all benefit from an economical and convenient portable eyewash station.
