

NEW Cherrington Beach Screener

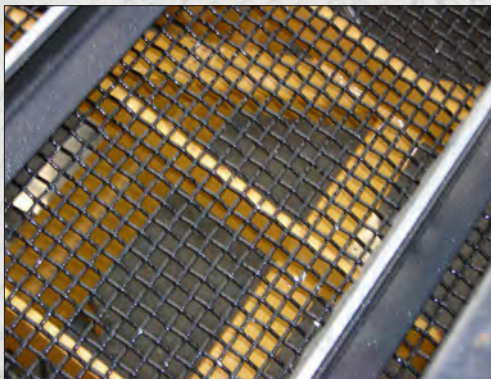

Models 4600XL and 4500XL

Expectations are higher. Budgets are tighter. Competition for guests and beach patrons is tougher.

What is the best solution?

One-Pass Beach Screening!

Let your Beach Patrons Experience a "Screened-Clean" Beach!
When you screen 2" to 6" deep, you have a clean, aerated and sanitized beach like never before!

With beach screening you can't miss - remove everything larger than the chosen screen hole size and return the sand to the beach.

Cherrington uses a low maintenance, one-piece, non-rotating, but intensely oscillating sifting screen to remove seaweed, trash, cigarette filters, bottles, tree litter, stones, tar balls, coral and everything else on the first pass.

The Cherrington 4600XL and 4500XL are fast, rugged and dependable with only 3 bearings and no revolving belts, tines, or screens for amazingly low maintenance and long life. Carbide glide pucks for long life and smooth, quiet operation.

Compact size and "power-delivered-to-the-screen" design. Cherrington uses a new advance engineered hydraulic system to power a sifting screen so intensely that it makes for fast Routine Cleaning and deep down Beach Sanitizing.

Your Cleaner Beach Will Be Noticed. A Cherrington Model 4600XL or 4500XL Screener makes it possible to maintain a cleaner, safer beach quickly and with much lower operating costs than any other beachcleaner. Cherrington's Lift and Screen method reduces bacteria while removing all debris larger than the screen hole size, such as cigarette filters, broken glass, stones, trash, tar balls and seaweed.
