

Naturally Effective Duct and Pipe Wrap Insulations

Cotton Armor is a naturally superior pipe and duct wrap

Made from 85% recycled content, Cotton Armor pipe and duct wraps provide an eco-friendly solution for sweating pipes and heat loss from air-ducts and water pipes.

Unlike traditional fiberglass, cotton will not cause irritation or itching that is associated with glass as it doesn't contain or release glass slivers and its flexibility makes it easy to wrap, which can reduce installation time. The natural advantages of Cotton Armor allow environmentally concerned contractors and building owners to protect their buildings and energy dollars in a manner that satisfies their green conscience. An added benefit of Cotton

Armor is sound suppression. The natural sound attenuating properties of cotton make Cotton Armor duct and pipe wraps an ideal material for those looking to quiet noisy ducts and pipes.

manufacturer in the world, and supplies a variety of insulation products throughout the United States. Applegate currently operates facilities in Michigan, Wisconsin, Pennsylvania, Kentucky, Georgia, Louisiana, and Colorado. For additional information regarding Applegate Insulation, visit [ABOUT US](#).

Cotton Armor foil-backed duct wrap can conserve energy.

According to the Department of Energy (DOE), "...uninsulated or poorly insulated ducts in unconditioned spaces can lose through conduction 10%–30% of the energy used to heat and cool your home." Cotton Armor foil-backed duct wrap is optimized for quick external installation on commercial and residential heating and air conditioning ducts, and is suitable for rectangular or circular ducts where temperature and moisture control is needed for an energy efficient building.

Cotton Armor foil-backed pipe wrap.

The DOE also states, "Insulating your hot water pipes reduces heat loss and can raise water temperature 2°F–4°F hotter than uninsulated pipes can deliver, allowing for a lower water temperature setting. You also won't have to wait as long for hot water when you turn on a faucet or showerhead, which helps conserve water." Cotton Armor foil-backed pipe wrap is optimized for residential pipes, maximizing thermal control for hot water pipes and
