

# Conveyor belts

NST series are conveyor belts manufactured with a special abrasion and cut resistant rubber, characterized by a high tear resistance even under adverse climatic conditions and agents.

You can optionally install a magnetic iron remover, which is perfect to separate ferrous from non-magnetic pieces automatically.

The use of ferrite permanent magnets can achieve the same result as an electromagnetic separator, but with the advantage of energy saving and low maintenance.

Various models of the series are distinguished by length and width, depending on their use.

## Technical Data

Installed power: 1,5Kw

Electrical requirements: 400V (three-phase), 50Hz  
(changeable on request)

Belt Dimensions: diam. 170, l. 530mm

Dimensions: 3400x600x1800mm

Weight: 300Kg
