The Mystic Washer® Waste Water Recycling/Filtration System

The innovative design of the Mystic Washer® Waste Water Recycle System offers extraordinary efficiency due to its greater water capacity. This results in an improved settling time for suspended solids, which helps prolong the life of the polishing filters. Even greater efficiency and filter life are maintained by adding a separation tank for use as a pre-filter to the system. Ask us for details when you call.

The Mystic Washer® WWR System offers a two-step reduction, polishing filter manifold that removes suspended particles down to a five-micron size at a rate of 11 gallons per minute. The package incorporates oleophilic (oil attracting) coalescing plates, reusable oil filtering foam media and oil absorption skimmer media to both clean and improve water clarity. When dirty wastewater has gone through our WWR System, in most jurisdictions it may be legally and safely discharged back onto the ground.

When using the Mystic Washer® WWR System, we highly recommend adding a 200–400-gallon agricultural-type plastic water tank outfitted with a pump that offers a minimum of 40# of outflow pressure. This will provide the volume of water capacity needed to stay on the job without refilling for extended periods of time.

Mystic Washer® WWR System Specifications:

- Electrical requirements: 120VAC @ 2000 Watts
- Flow rate: 11GPM
- Capacity: 160 gallons
- Dimensions: Length: 60"; Depth: 42"; Height: 48"
- Weight (Dry): 300 lbs
- Inlet: 1" NPT
- Outlet: 3/4" NPT

The Mystic Washer® WWR System ships with five (5) replacement filter sets, each with two filters. This is considered a typical 6-month's supply. Refill packages of 10 filters (5 each of the 2 different sizes) are about \$250/set.
