

Aquatic Skimmers

Retrieval Vessels for Floating Trash & Debris

Heavy-duty work-boats for use in all bodies of water, including:

- Ports
- Harbours
- Marinas

Aquatic Skimmers are designed for the purpose of collecting and loading floating trash and debris onto their storage conveyors, transporting the cargo to an off-loading point and discharging the load into a suitable container or transport.

Aquatic Skimmers:

- Keep waterfronts attractive & desirable
- Enhance tourism at downtown waterfronts & parks
- Reduce health risks by removing toxic pollutants
- Reduce watercraft damage
- Assist in Hydro power clean-up and functioning

Depending on the size and capacity, Aquatic Skimmer Boats are propelled by hydraulically driven paddle-wheels, outboard engine(s), inboard/outboard diesel engine(s) or hydraulic outboard(s) and they are capable of collecting up to 1200 cubic feet (34 cubic meters) of floating debris per load.
